

Journal Report 1 (JR1)

Journal Report 1 (JR1) highlights the total number of successful full-text article requests by month and by journal. Librarians commonly use JR1 metrics to analyse user activity across online journals to which their institution provides access. The statistics may relate to individual journal subscriptions or to full-text databases that bundle together a large number of titles. As JR1 supplies data for the total number of article downloads from individual titles, across a selected time period, libraries can gain valuable insight into which online journals are popular/not so popular with their patrons. Librarians may find it helpful to group journals into basic categories of use (e.g. high, medium, low) to make their analysis easier to understand. The limits for these usage bands would be set by library staff, and may well differ between institutions.

For example, a library may choose to classify as 'high use' a title that has received more than 100 downloads in any given period; 'medium use' may mean total downloads between 51 and 100, and so on. The usage ranges can be reviewed regularly to check if the library's journal provision is providing adequate support.
