Portraits of Labor Market Exclusion Ramya Sundaram,Ulrich Hoerning,Natasha de Andrade Falcão,Natalia Millán,Carla Tokman,Michele Zini,2015-07-16 Portraits of Labor Market Exclusion presents profiles or portraits of individuals who have limited labor market attachment It is widely accepted that those with limited attachment to the labor market are a highly heterogeneous group including for instance recent job losers long term unemployed school leavers with no labor market experience those close to retirement age or people with caring responsibilities and that understanding their circumstances and potential barriers is an essential prerequisite for designing and implementing a tailored and effective mix of policy support and incentives The report takes a comprehensive view focusing on both the labor market attachment of a country's out of work population and the social assistance package and poverty profile of the same segment of the population In essence the report looks at individuals through the lenses of both poverty welfare status and labor market indicators and in doing so the portraits helps move the dialogue from a purely labor market centric view to a broader dialogue that includes social policy as a whole This is an important shift for instance social protection programs such as family benefits and maternity benefits and broader social policy issues such as retirement ages often have a great impact on who remains inactive Specifically the report presents portraits of the out of work population of six countries Bulgaria Estonia Greece Hungary Lithuania and Romania in terms of distance from the labor market human capital and labor supply conditions as well as demographic conditions The analysis relies on the European Union Statistics of Income and Living Conditions EU SILC surveys for the years 2007 to 2011 Latent class analysis methodology allows multidimensional profiling of the out of work population and identifies classes or groups of out of work individuals that are as homogeneous as possible within each class according to a set of observable characteristics and as distant as possible between classes Consequently this analysis provides a much richer glimpse of the very different barriers to labor market integration that these various groups experience considerably augmenting the limited amount of information contained in traditional descriptive statistics
