Schweber,2020-05-05 In the 1930s physics was in a crisis There appeared to be no way to reconcile the new theory of  
quantum mechanics with Einstein s theory of relativity Several approaches had been tried and had failed In the post World  
War II period four eminent physicists rose to the challenge and developed a calculable version of quantum electrodynamics  
QED probably the most successful theory in physics This formulation of QED was pioneered by Freeman Dyson Richard  
Feynman Julian Schwinger and Sin Itiro Tomonaga three of whom won the Nobel Prize for their work In this book physicist  
and historian Silvan Schweber tells the story of these four physicists blending discussions of their scientific work with  
fascinating biographical sketches Setting the achievements of these four men in context Schweber begins with an account of  
the early work done by physicists such as Dirac and Jordan and describes the gathering of eminent theorists at Shelter Island  
in 1947 the meeting that heralded the new era of QED The rest of his narrative comprises individual biographies of the four  
physicists discussions of their major contributions and the story of the scientific community in which they worked Throughout  
Schweber draws on his technical expertise to offer a lively and lucid explanation of how this theory was finally established as  
the appropriate way to describe the atomic and subatomic realms
