Design + Environment Helen Lewis, John Gertsakis, Tim Grant, Nicola Morelli, Andrew Sweatman, 2017-09-08 There is a huge scarcity of good practical resources for designers and students interested in minimizing the environmental impacts of products Design Environment has been specifically written to address this paucity The book first provides background information to help the reader understand how and why design for environment DfE has become so critical to design with reference to some of the most influential writers designers and companies in the field Next Design Environment provides a step by step approach on how to approach DfE to design a product that meets requirements for quality cost manufacturability and consumer appeal while at the same time minimising environmental impacts The first step in the process is to undertake an assessment of environmental impacts using life cycle assessment LCA or one of the many simpler tools available to help the designer From then on DfE becomes an integral part of the normal design process including the development of concepts design of prototypes final design and development of marketing strategies Environmental assessment tools and strategies to reduce environmental impacts such as the selection of appropriate materials are then discussed Next some of the links between environmental problems such as global warming ozone depletion water and air pollution and the everyday products we consume are considered In order to design products with minimal environmental impact we need to have a basic understanding of these impacts and the interactions between them The four subsequent chapters provide more detailed strategies and case studies for particular product groups packaging textiles furniture and electrical and electronic products Guidelines are provided for each of the critical stages of a product's life from the selection of raw materials through to strategies for recovery and recycling Finally Design Environment takes a look at some of the emerging trends in DfE that are offering us the opportunity to make a more significant reduction in environmental impacts Both the development of more sustainable materials and technologies and the growing interest in leasing rather than selling products are examined Design Environment is organized as a workbook rather than an academic text It should be read once and then used as a key reference source This clear and informative book will prove to be invaluable to practising designers to course directors and their students in need of a core teaching and reference text and to all those interested in learning about the tools and trends influencing green product design The authors have all been involved in an innovative demonstration programme called EcoReDesign which was developed by the Centre for Design at RMIT University with funding from the Australian government The Centre successfully collaborated with Australian companies to improve the environmental performance of their products by following DfE principles

Life Cycle Assessment and Environmental Impact of Polymeric Products T. J. O'Neill, 2003 This review describes the process of life cycle analysis in some detail It describes the different organisations involved in researching and applying these

techniques and the database resources being used to generate comparative reports The overview explains the factors to be considered the terminology the organisations involved in developing these techniques and the legislation which is driving the whole process forward The ISO standards relating to environmental management are also discussed briefly in the document Design for the environment is covered in the report This review is accompanied by summaries of selected papers on life cycle analysis and environmental impact from the Rapra Polymer Library database [Design & Applied Arts Index](#) ,1999
