Hurricanes and Climate Change Jennifer M. Collins, Kevin Walsh, 2017-02-20 This book provides research that shows tropical cyclones are more powerful than in the past, with the most dramatic increases occurring over the North Atlantic and with the strongest hurricanes. Although such increases are correlated with warming oceans and are consistent with the thermodynamic theory of hurricane intensity, there remains doubt about the interpretation, integrity, and meaning of these results. Arising from the 5th International Summit on Hurricanes and Climate Change, this book contains new research on topics related to hurricanes and climate change. Bringing together international leading academics and researchers on various sides of the debate, the book discusses new research and expresses opinions about what is happening and what might happen in the future with regard to regional and global hurricane/tropical cyclone activity.

The Risk City Yusef Jabareen, 2015-04-23 Contemporary cities face phenomenal risks, and they face particularly high levels of mounting social and environmental risks, including social polarization, urban conflicts, riots, terror, and climate change threats. This book

suggests that climate change and its resulting uncertainties challenge the concepts procedures and scope of conventional approaches to planning creating a need to rethink and revise current planning methods Therefore this book suggests a paradigm shift in our thinking interrogation and planning of our cities Based on the contemporary conditions of risk at cities this book conceptualizes the risk city as a construct of three interlinked concepts of risk trust and practice It is a construct of risk and its new evolving conditions and knowledge of uncertainties stem from climate change and other risks and uncertainties As a construct of practices the risk city produces social and political institutional framework and promotes practices accordingly in order to reduce risk and risk possibilities and to increase trust In light of the complex challenges and risks to the human habitat that have emerged in recent years many cities have prepared various types of plans aimed at addressing the challenges posed by climate change Nonetheless despite the importance of these plans and the major public resources invested in their formulation we still know little about them and have yet to begin studying them and assessing their contributions From the innovative perspective of the risk city this book asks critical questions about the nature vision practices and potential impact of the recent climate change oriented plans What kinds of risks do they attempt to address what types of practices do they institute and what types of approaches do they apply Do they adequately address the risks and uncertainties posed How do they contribute to the worldwide effort to reduce greenhouse gas emissions This book uses the methodologically innovative Risk City framework to examine the nature vision outcomes practices and impact of these crucial plans as well as their contribution to the resilience of our cities and to global efforts toward reducing greenhouse gas emissions
