Panda, 2019-04-19 Epoxy is a term used to denote both the basic components and the cured end products of epoxy resins as well as a colloquial name for the epoxide functional group Epoxy resin are a class of thermoset materials used extensively in structural and specialty composite applications because they offer a unique combination of properties that are unattainable with other thermoset resins Epoxies are monomers or prepolymers that further reacts with curing agents to yield high performance thermosetting plastics. They have gained wide acceptance in protecting coatings electrical and structural applications because of their exceptional combination of properties such as toughness adhesion chemical resistance and superior electrical properties Epoxy resins are characterized by the presence of a three membered cycle ether group commonly referred to as an epoxy group 1 2 epoxide or oxirane The most widely used epoxy resins are diglycidyl ethers of bisphenol A derived from bisphenol A and epichlorohydrin The market of epoxy resins are growing day by day Today the total business of this product is more than 100 crores Epoxy resins are used for about 75% of wind blades currently produced worldwide while polyester resins account for the remaining 25% A standard 1 5 MW megawatt wind turbine has approximately 10 tonnes of epoxy in its blades Traditionally the markets for epoxy resins have been driven by
