Marantz Model Pmd660 Manual:

Sound perception and production in a foreign language Nimz, Katharina, 2016-04-13 The present study addresses the question of how German vowels are perceived and produced by Polish learners of German as a Foreign Language It comprises three main experiments a discrimination experiment a production experiment and an identification experiment With the exception of the discrimination task the experiments further investigated the influence of orthographic marking on the perception and production of German vowel length It was assumed that explicit markings such as the Dehnungs h lengthening h could help Polish GFL learners in perceiving and producing German words more correctly The discrimination experiment with manipulated nonce words showed that Polish GFL learners detect pure length differences in German vowels less accurately than German native speakers while this was not the case for pure quality differences The results of the identification experiment contrast with the results of the discrimination task in that Polish GFL learners were better at judging incorrect vowel length than incorrect vowel quality in manipulated real words However orthographic marking did not turn out to be the driving factor and it is suggested that metalinguistic awareness can explain the asymmetry between the two perception experiments The production experiment supported the results of the identification task in that lengthening h did not help Polish learners in producing German vowel length more correctly Yet as far as vowel quality productions are concerned it is argued that orthography does influence L2 sound productions because Polish learners seem to be negatively influenced by their native grapheme to phoneme correspondences It is concluded that it is important to differentiate between the influence of the L1 and L2 orthographic system On the one hand the investigation of the influence of orthographic vowel length markers in German suggests that Polish GFL learners do not make use of length information provided by the L2 orthographic system On the other hand the vowel quality data suggest that the L1 orthographic system plays a crucial role in the acquisition of a foreign language It is therefore proposed that orthography influences the acquisition of foreign sounds but not in the way it was originally assumed

Phonology in the Bilingual and Bidialectal Lexicon Isabelle Darcy, Annie Tremblay, Miquel Simonet, 2017-07-06 A conversation between two people can only take place if the words intended by each speaker are successfully recognized Spoken word recognition is at the heart of language comprehension This automatic and smooth process remains a challenge for models of spoken word recognition Both the process of mapping the speech signal onto stored representations for words and the format of the representation themselves are subject to debate So far existing research on the nature of spoken word representations has focused mainly on native speakers The picture becomes even more complex when looking at spoken word recognition in a second language Given that most of the world's speakers know and use more than one language it is crucial to reach a more precise understanding of how bilingual and multilingual individuals encode spoken words in the mental lexicon and why spoken word recognition is more difficult in a second language than in the native language Current models of native spoken word recognition operate under two assumptions i

that listeners perception of the incoming speech signal is optimal and ii that listeners lexical representations are accurate As a result lexical representations are easily activated and intended words are successfully recognized However these assumptions are compromised when applied to a later learned second language For a variety of reasons e g phonetic phonological orthographic second language users may not perceive the speech signal optimally and they may still be refining the motor routines needed for articulation Accordingly their lexical representations may differ from those of native speakers which may in turn inhibit their selection of the intended word forms Second language users also have to solve a larger selection challenge having words in more than one language to choose from Thus for second language users the links between perception lexical representations orthography and production are all but clear Even for simultaneous bilinguals important questions remain about the specificity and interdependence of their lexical representations and the factors influencing cross language word activation This Frontiers Research Topic seeks to further our understanding of the factors that determine how multilinguals recognize and encode spoken words in the mental lexicon with a focus on the mapping between the input and lexical representations and on the quality of lexical representations *Bioacoustics* ,2005 Model
