A Geography of Infection Matthew R. Smallman-Raynor, Andrew D. Cliff, J. Keith Ord, Peter Haggett, 2022-02-10 The last half century has witnessed two landmark events in medical history The 1970s saw euphoria about the defeat of one of humankind's oldest disease scourges with the global eradication of smallpox To set against this the 2020s are experiencing the pandemic ravages of new viral diseases of which COVID 19 is currently the most potent But it is only the latest of a succession of threats A Geography of Infection explores the distinctive spatial patterns and processes by which such infectious diseases spread from place to place and can grow from local and regional epidemics into global pandemics This resource focuses initially on the local scale of doctors practices and small islands where epidemic outbreaks are slight in the numbers infected and in geographical extent Such local area studies raise two questions First how and where do epidemic diseases emerge and second why do more diseases appear to be emerging now To approach such questions implies a shift in spatial gear from painting epidemics with a fine tipped local brush to an expanded palette on which doctors practices and small islands are replaced by regional and global populations Simultaneously time bands are extended backwards to the origins of civilization and forwards into the twenty first century It eventually leads to a consideration of global pandemics both historical for example plague cholera and influenza and contemporary HIV AIDS and COVID 19 and examines the ways the spread of infection can be prevented All chapters are extensively illustrated with full colour diagrams and maps some of which are in colour for the first time Bringing together the authors collective 150 years of experience in research mapping and writing on spatial aspects of medical history this is an invaluable resource for anyone interested in the spread control and eradication of epidemic and pandemic diseases

Reframing Climate Change Shannon O'Lear, Simon Dalby, 2015-07-24 Change the system not the climate is a common slogan of climate change activists Yet when this idea comes into the academic and policy realm it is easy to see how climate change discourse frequently asks the wrong questions Reframing Climate Change encourages social scientists policy makers and graduate students to critically consider how climate change is framed in scientific social and political spheres It proposes ecological geopolitics as a framework for understanding the extent to which climate change is a meaningful analytical focus as well as the ways in which it can be detrimental detracting attention from more productive lines of thought research and action The volume draws from multiple perspectives and disciplines to cover a broad scope of climate change Chapter topics range from climate science and security to climate justice and literacy Although these familiar concepts are widely used by scholars and policy makers they are discussed here as frequently problematic when used as lenses through which to study climate change Beyond merely reviewing current trends within these different approaches to climate change the collection offers a thoughtful assessment of these approaches with an eye towards an overarching reconsideration of the current understanding of our relationship to climate change Reframing Climate Change is an essential resource for students policy makers and anyone interested in understanding more about this

important topic Who decides what the priorities are Who benefits from these priorities and what kinds of systems or actions are justified or hindered The key contribution of the book is the outlining of ecological geopolitics as a different way of understanding human environment relationships including and beyond climate change issues **Advances in the**

Evolutionary Ecology of Termites Alberto Arab,Solange Del Carmen Issa Ponce,Daniel Aguilera-Olivares,2023-08-16

Termites are eusocial insects that live in colonies composed of hundreds to millions of individuals Their colonies are mainly organized into reproductive and non reproductive castes which have specific tasks such as nest construction foraging reproduction brood care and colony defense The evolution of the symbiotic association between termites and microorganisms allows them to decompose ingested lignocellulose from plant substrates such as wood including herbivore dung and soil humus making them important insect decomposers that play a crucial role in ecosystem functioning by contributing to litter decomposition soil formation and nutrient cycling On the other hand termites have recently been classified as eusocial cockroaches which have gained increasing attention in evolutionary studies to understand the transition to eusociality from subsocial wood roaches This current growing interest in termite research calls for a collection dedicated to these fascinating insects *The Northern Question* Tom Hazeldine,2021-09-21 A history of the UK s regional inequalities and why they matter

Differences between England s North and South continue to shape national politics from attitudes to Brexit and the electoral collapse of Labour s Red Wall to Whitehall s experimentation with regional pandemic lockdowns Why is this fault line such a persistent feature of the English landscape The Northern Question is a history of England seen in the unfamiliar light of a northern perspective While London is the capital and the centre for trade and finance the proclaimed leader of the nation northern England has always seemed like a different country In the nineteenth century its industrializing society appeared set to bring a political revolution down upon Westminster and the City Tom Hazeldine recounts how subsequent governments put finance before manufacturing London ahead of the regions and austerity before reconstruction **Optimize Your**

In Sickness and in Wealth Carol Chan, 2018-08-10 Villagers in Indonesia hear a steady stream of stories about the injuries abuses and even deaths suffered by those who migrate in search of work So why do hundreds of thousands of Indonesian workers continue to migrate every year Carol Chan explores this question from the perspective of the origin community and provides a fascinating look at how gender faith and shame shape these decisions to migrate Villagers evaluate men's and women's migrations differently leading to different ideas about which kinds of human or financial flows should be encouraged and which should be discouraged or even criminalized Despite routine and well documented instances of exploitation of Indonesian migrant workers some villagers still emphasize that a migrant's success or failure ultimately depends on that individual's morality fate and destiny Indonesian villagers construct strategies for avoiding migration related risks that are closely linked to faith

and belief in supernatural agency These strategies shape the flow of migration from the country and help to ensure the continued confidence Indonesian people have in migration as an act of promise and hope

Measures on the Importation of Live Pigs Pork and Other Pig Products from the European Union WT DS475 **North Korean Military Proliferation in the Middle East and Africa** Bruce E. Bechtol Jr., 2018-09-07 North Korea has posed a threat to stability in Northeast Asia for decades Since Kim Jong un assumed power this threat has both increased and broadened Since 2011 the small isolated nation has detonated nuclear weapons multiple times tested a wide variety of ballistic missiles expanded naval and ground systems that threaten South Korea and routinely employs hostile rhetoric Another threat it poses has been less recognized North Korea presents a potentially greater risk to American interests by exporting its weapons systems to other volatile regions worldwide In North Korean Military Proliferation in the Middle East and Africa Bruce E Bechtol Jr analyzes relevant North Korean military capabilities what arms the nation provides and to whom how it skirts its sanctions and how North Korea s activities can best be contained He traces illicit networks that lead to state and nonstate actors in the Middle East including Syria Iran Hezbollah and Hamas and throughout Africa including at least a dozen nations The potential proliferation of nuclear and chemical weapons technology and the vehicles that carry it including ballistic missiles and artillery represent a broader threat than the leadership in Pyongyang Including training and infrastructure support North Korea s profits may range into the billions of dollars all concealed in illicit networks and front companies so complex that the nation struggles to track and control them Bechtol not only presents an accurate picture of the current North Korean threat he also outlines methodologies that Washington and the international community must embrace in order to contain it **Dark Skies** Daniel Deudney, 2020-03-02 Space is again in the headlines E billionaires Jeff Bezos and Elon Musk are planning to colonize Mars President Trump wanted a Space Force to achieve space dominance with expensive high tech weapons The space and nuclear arms control regimes are threadbare and disintegrating Would be asteroid collision diverts space solar energy collectors asteroid miners and space geo engineers insistently promote their Earth changing mega projects Given our many looming planetary catastrophes from extreme climate change to runaway artificial superintelligence looking beyond the earth for solutions might seem like a sound strategy for humanity And indeed bolstered by a global network of fervent space advocates and seemingly rendered plausible even inevitable by oceans of science fiction and the wizardly of modern cinema space beckons as a fully hopeful path for human survival and flourishing a positive future in increasingly dark times But despite even basic questions of feasibility will these many space ventures really have desirable effects as their advocates insist In the first book to critically assess the major consequences of space activities from their origins in the 1940s to the present and beyond Daniel Deudney argues in Dark Skies that the major result of the Space Age has been to increase the likelihood of global nuclear war a fact conveniently obscured by the failure of recognize that nuclear armed ballistic missiles are inherently space weapons The most important practical finding of Space Age science also rarely emphasized is the discovery that we live on Oasis Earth tiny and fragile and teeming with astounding life but surrounded by an utterly desolate and inhospitable wilderness stretching at least many trillions of miles in all directions As

he stresses our focus must be on Earth and nowhere else Looking to the future Deudney provides compelling reasons why space colonization will produce new threats to human survival and not alleviate the existing ones That is why he argues we should fully relinquish the quest Mind bending and profound Dark Skies challenges virtually all received wisdom about the final frontier

Handbook on Human Rights in China Sarah Biddulph, Joshua Rosenzweig, 2019 This Handbook gives a wide ranging account of the theory and practice of human rights in China viewed against international standards and China's international engagements around human rights The Handbook is organised into the following sections contested meanings international dimensions economic and social rights civil and political rights rights in action and access to justice political dimensions of human rights in Greater China and new frontiers

Embodying Geopolitics Nicola Pratt, 2020-10-27 When women took to the streets during the mass protests of the Arab Spring the subject of feminism in the Middle East and North Africa returned to the international spotlight In the subsequent years countless commentators treated the region's gender inequality as a consequence of fundamentally cultural or religious problems In so doing they overlooked the specifically political nature of these women's activism Moving beyond such culturalist accounts this book turns to the relations of power in regional and international politics to understand women's struggles for their rights Based on over a hundred extensive personal narratives from women of different generations in Egypt Jordan and Lebanon Nicola Pratt traces women's activism from national independence through to the Arab uprisings arguing that activist women are critical geopolitical actors Weaving together these personal accounts with the ongoing legacies of colonialism *Embodying Geopolitics* demonstrates how the production and regulation of gender is integrally bound up with the exercise and organization of geopolitical power with consequences for women's activism and its effects

After the Education Wars Andrea Gabor, 2018-06-12 The education wars have been demoralizing for teachers *After the Education Wars* helps us to see a better way forward Cathy N Davidson The New York Times Book Review *After the Education Wars* is an important book that points the way to genuine reform Diane Ravitch author of *Reign of Error* and *The Death and Life of the Great American School System* A bestselling business journalist critiques the top down approach of popular education reforms and profiles the unexpected success of schools embracing a nimbler more democratic entrepreneurialism In an entirely fresh take on school reform business journalist and bestselling author Andrea Gabor argues that Bill Gates Eli Broad and other leaders of the prevailing education reform movement have borrowed all the wrong lessons from the business world *After the Education Wars* explains how the market based measures and carrot and stick incentives informing today's reforms are out of sync with the nurturing culture that good schools foster and contrary to popular belief at odds with the best practices of thriving twenty first century companies as well These rich detailed stories of real reform in action illustrate how enduring change must be deeply collaborative and relentlessly focused on improvement from the grass roots up lessons also learned from both the open source software and quality movements The good news is that solutions born of this philosophy are all around us from Brockton Massachusetts

where the state's once failing largest high school now sends most graduates to college to Leander Texas a large district where school improvement spurred by the ideas of quality guru W Edwards Deming has become a way of life A welcome exception to the doom and gloom canon of education reform After the Education Wars makes clear that what's needed is not more grand ideas but practical and informed ways to grow the best ones that are already transforming schools
