Medical Records Manual, 2002 This manual is aimed at helping medical record workers in the development and management of medical records services of health care facilities in developing countries in an effective and efficient manner. It covers manual procedures and may be used as an adjunct to computerized systems. It does not provide all of the options for medical record management but it does provide one option in each area for the management of medical records in developing countries. Statistical Methods in Healthcare Frederick W. Faltin, Ron S. Kenett, Fabrizio Ruggeri, 2012-07-24 Statistical Methods in Healthcare In recent years the number of innovative medicinal products and devices submitted and approved by regulatory bodies has declined dramatically. Statistical Methods in Healthcare focuses on the application of statistical methodologies to evaluate promising

alternatives and to optimize the performance and demonstrate the effectiveness of those that warrant pursuit is critical to success Statistical methods used in planning delivering and monitoring health care as well as selected statistical aspects of the development and or production of pharmaceuticals and medical devices are also addressed With a focus on finding solutions to these challenges this book Provides a comprehensive in depth treatment of statistical methods in healthcare along with a reference source for practitioners and specialists in health care and drug development Offers a broad coverage of standards and established methods through leading edge techniques Uses an integrated case study based approach with focus on applications Looks at the use of analytical and monitoring schemes to evaluate therapeutic performance Features the application of modern quality management systems to clinical practice and to pharmaceutical development and production processes Addresses the use of modern statistical methods such as Adaptive Design Seamless Design Data Mining Bayesian networks and Bootstrapping that can be applied to support the challenging new vision Practitioners in healthcare related professions ranging from clinical trials to care delivery to medical device design as well as statistical researchers in the field will benefit from this book

When Healthcare Hurts Greg Seager, 2012 Empowerment or Disempowerment There are three paths to take when designing and implementing global health initiatives One leads to the community one leads to the health system and the last leads to the community through the local health system Working at the community level is more complex and it should be considered only by programs that are experienced in doing so or in partnership with programs that have that experience Unfortunately this is where most short term programs choose to partner and this leads to many challenges Working in and through local health systems is the best way to eliminate most of these challenges Working at the health system and hospital level eliminates most of the patient safety issues associated with short term health initiatives It also pairs programs that understand each other together Thinking about community level global health initiatives is often completely foreign to most western medical programs We term these community based programs horizontal because they arise from the community for the community Hospital systems are programs that are vertical in nature and western medical thinking is typically very vertical We will look at the idea of both vertical and horizontal models in this chapter so that you can clearly identify the best fit for your global health initiatives It is essential that we realize that using strictly vertical approaches to healthcare delivery in resource poor communities can be more harmful than helpful This is especially true if those projects are separated from local healthcare professionals and their services In many cultures everything western is better sought after and to be imitated while old ways of tradition and caring should be left behind and abandoned Alma Ata which we will discuss later in this chapter gave rise to the idea of horizontal community based programs That thinking has matured into sustainable models of healthcare and disease prevention If your program plans to function outside hospitals in the community then you need to invest time in learning how to design and implement horizontal community based programs If we do not learn respect and implement these methods we may be destined to leave a legacy of

disempowerment and dependence on methods of healthcare that have proven ineffective in resource poor communities The opposite side to this is that if we do learn these methods there is no limit to the effect the enormous volume of short term volunteer teams could have on child mortality maternal mortality HIV AIDS malaria and other communicable diseases As healthcare providers trained in developed countries we need to let go of the idea that our methods of healthcare are the only methods There are methods short term teams can use to serve and support such projects we review some of these methods in this chapter
