Business Studies Leisure and Pleasure Caroline Daley, 2013-10-01 This exploration of an unexpected aspect of New Zealand social history examines the human body at leisure in the years 1900 growing ideas about fitness health and exercise the rise of beauty contests the culture of the beach and the pool nudism and children s play and the appearance of playgrounds The central aim is to explore how bodies men s women s and children s were shaped and displayed through various leisure pursuits in 20th century New Zealand The Atomic West Bruce W. Hevly, John M. Findlay, 2011-12-01 The Manhattan Project the World War II race to produce an atomic bomb transformed the entire country in myriad ways but it did not affect each region equally Acting on an enduring perception of the American West as an empty place the U S government located a disproportionate number of nuclear facilities particularly the ones most likely to spread pollution in western states The Manhattan Project manufactured plutonium at Hanford Washington designed and assembled bombs at Los Alamos New Mexico and detonated the world s first atomic bomb at Alamogordo New Mexico on June 16 1945 In the years that followed the war the U S Atomic Energy Commission selected additional western sites for its work Many westerners initially welcomed the atom Like federal officials they too regarded their region as empty or underdeveloped Facilities to make test and base atomic weapons sites to store nuclear waste and even nuclear power plants were regarded as assets By the 1960s and 1970s however regional attitudes began to change At a variety of locales ranging from Eskimo Alaska to Mormon Utah westerners devoted themselves to resisting the atom and its effects on their environments and communities Just as the atomic age had dawned in the American West so its artificial sun began to set there The Atomic West brings together contributions from several disciplines to explore the impact on the West of the development of atomic power from wartime secrecy and initial postwar enthusiasm to public doubts and protest in the 1970s and 1980s An impressive example of the benefits of interdisciplinary studies on complex topics The Atomic West advances our understanding of both regional history and the history of science and does so with human communities as a significant focal point The book will be of special interest to students and experts on the American West environmental history and the history of science and technology *Chemical News and Journal of Physical Science* ,1916 Scientists in the Classroom J. Rudolph, 2002-05-02 During the 1950s leading American scientists embarked on an unprecedented project to remake high school science education Dissatisfaction with the soft school curriculum of the time advocated by the professional education establishment and concern over the growing technological sophistication of the Soviet Union led government officials to encourage a handful of elite research scientists fresh from their World War II successes to revitalize the nations science curricula In *Scientists in the Classroom* John L Rudolph argues that the Cold War environment long neglected in the history of education literature is crucial to understanding both the reasons for the public acceptance of scientific authority in the field of

education and the nature of the curriculum materials that were eventually produced Drawing on a wealth of previously untapped resources from government and university archives Rudolph focuses on the National Science Foundation supported curriculum projects initiated in 1956 What the historical record reveals according to Rudolph is that these materials were designed not just to improve American science education but to advance the professional interest of the American scientific community in the postwar period as well

A Learning Profession? Wendy Robinson, 2014-07-11 This ground breaking book uncovers a hidden history of the professional development of serving teachers Drawing on hitherto unpublished archive material Wendy Robinson reveals an optimistic and liberal age of high class conferences in the 1920s and 1930s in London hotels and Oxford colleges free from government control where teachers from across the country and abroad gathered for professional intellectual and cultural refreshment The status attached to these occasions was signified by the celebrities who graced them including royalty public intellectuals educational practitioners and politicians Professor Robinson then shows how post war training became more instrumental taken over by the Ministry of Education with its centrally prescribed advanced courses and from 1970 by Local Education Authorities invention of apparently democratic Teachers Centres This analysis is complemented by face to face interviews with teachers and other practitioners once active in professional development Fascinating detailed interviews brilliantly capture teachers lived experience of professional development and its influence on their teaching career development and professional identity Fresh and original lucidly written by one of the leading historians of education in Britain A Learning Profession is essential and engaging reading for those interested in the development of a teaching profession

Physics in the Nineteenth Century Robert D. Purrington, 1997 Putting physics into the historical context of the Industrial Revolution and the European nation state Purrington traces the main figures including Faraday Maxwell Kelvin and Helmholtz as well as their interactions experiments discoveries and debates The success of nineteenth century physics laid the foundation for quantum theory and relativity in the twentieth Robert D Purrington is a professor of physics at Tulane University and coauthor of *Frame of the Universe*

Review of the Bureau of Reclamation's Corrosion Prevention Standards for Ductile Iron Pipe National Research Council, Division on Engineering and Physical Sciences, National Materials Advisory Board, Committee on the Review of the Bureau of Reclamation's Corrosion Prevention Standards for Ductile Iron Pipe, 2009-11-19 Ductile iron pipe DIP was introduced about 50 years ago as a more economical and better performing product for water transmission and distribution As with iron or steel pipes DIP is subject to corrosion the rate of which depends on the environment in which the pipe is placed Corrosion mitigation protocols are employed to slow the corrosion process to an acceptable rate for the application When to use corrosion mitigation systems and which system depends on the corrosivity of the soils in which the pipeline is buried The Bureau of Reclamation's specification for DIP in highly corrosive soil has been contested by some as an overly stringent requirement necessitating the pipe to be modified from its as manufactured state and thereby adding unnecessary cost to a pipeline system This book

evaluates the specifications in question and presents findings and recommendations. Specifically, the authoring committee answers the following questions: Does polyethylene encasement with cathodic protection work on ductile iron pipe installed in highly corrosive soils? Will polyethylene encasement and cathodic protection reliably provide a minimum service life of 50 years? What possible alternative corrosion mitigation methods for DIP would provide a service life of 50 years?

The Changing University Dorothy Shore Zinberg, 1991-05-31. This collection of papers was written for a NATO Advanced Research Workshop held at Harvard University in March 1990. The title, *The Changing University and the Education of Scientists and Engineers: An International Workshop*, is broad as it does not convey the sweep of data, information, opinions, and suggestions for future research and policy choices that were crowded into two and a half days of formal presentations, mealtime discussions, and teatime chats. The proposal for the workshop grew out of a research project I had carried out that explored the policies governing the education of foreign science and engineering students in several industrialized countries and of two countries that send large numbers of S E students abroad: the People's Republic of China (PRC) and Japan (see chapter 7). In research visits to these countries as well as to France, the United Kingdom, West Germany, and within the United States, I was struck by the similarity of issues that were raised. One was the concern that there would not be enough well-trained scientists and engineers to meet the constantly increasing demand for them. Government officials, industrialists, and educators repeatedly stressed that a well-educated and motivated work force was essential for their economies, national security, and for society as a whole. Many of those interviewed mentioned that universities are undergoing rapid systemic changes as governments and industry are calling on them to provide human resources and intellectual capital.

Brotherhood of the Bomb Gregg Herken, 2013-08-13. The scientists who made the nuclear bomb are the focus of this detailed, engrossing history of one of the greatest scientific discoveries of the 20th century. Publishers Weekly: "The story of the twentieth century is largely the story of the power of science and technology. Within that story is the incredible tale of the human conflict between Robert Oppenheimer, Ernest Lawrence, and Edward Teller, the scientists most responsible for the advent of weapons of mass destruction. The story of these three men, builders of the atomic and hydrogen bombs, is fundamentally about loyalty to country, to science, and to each other, and about the wrenching choices that had to be made when these allegiances came into conflict." In *Brotherhood of the Bomb*, Gregg Herken gives us the behind-the-scenes account based upon a decade of research, interviews, and newly released Freedom of Information Act and Russian documents.

Research and Relevant Knowledge Roger L. Geiger, 1993. With this book, Roger L. Geiger completes a two-volume study of American research universities in the twentieth century. The first volume, *To Advance Knowledge*, focused on those few institutions that first embodied academic research and their interaction with private supporters. This book describes how the federal government first relied on university scientists during World War II and how the resulting relationship set the pattern for the postwar mushrooming of academic research. Although the vicissitudes of federal university relations are one crucial element of this history, the focus is

on the universities themselves their internal aspirations to conduct research and their adaptations to external constraints and opportunities Detailed cases are offered of individual institutions during critical periods MIT and the University of California Berkeley in the postwar era Stanford and UCLA in the go go years after Sputnik and Georgia Tech and the University of Arizona during the difficult 1970s This book treats the many facets of research universities that impinge on their research role including the student rebellion of the 1960s The final chapter addresses factors underlying the embattled status of research universities in the 1990s Science Abstracts. Physics and Electrical Engineering ,1907

Linear Dynamical Systems on Hilbert Spaces: Typical Properties and Explicit Examples S. Grivaux,É. Matheron,Q. Menet,2021-06-21 We solve a number of questions pertaining to the dynamics of linear operators on Hilbert spaces sometimes by using Baire category arguments and sometimes by constructing explicit examples In particular we prove the following results i A typical hypercyclic operator is not topologically mixing has no eigen values and admits no non trivial invariant measure but is densely distributionally chaotic ii A typical upper triangular operator with coefficients of modulus 1 on the diagonal is ergodic in the Gaussian sense whereas a typical operator of the form diagonal with coefficients of modulus 1 on the diagonal plus backward unilateral weighted shift is ergodic but has only countably many unimodular eigenvalues in particular it is ergodic but not ergodic in the Gaussian sense iii There exist Hilbert space operators which are chaotic and U frequently hypercyclic but not frequently hypercyclic Hilbert space operators which are chaotic and frequently hypercyclic but not ergodic and Hilbert space operators which are chaotic and topologically mixing but not U frequently hypercyclic We complement our results by investigating the descriptive complexity of some natural classes of operators defined by dynamical properties
