The Mind As a Scientific Object Christina E. Erneling, David M. Johnson, 2005-01-13 What holds together the various fields that are supposed to constitute the general intellectual discipline that people now call cognitive science In this book Erneling and Johnson identify two problems with defining this discipline First some theorists identify the common subject matter as the mind but scientists and philosophers have not been able to agree on any single satisfactory answer to the question of what the mind is Second those who speculate about the general characteristics that belong to cognitive science tend to assume that all the particular fields falling under the rubric psychology linguistics biology and son on are of roughly equal value in their ability to shed light on the nature of mind This book argues that all the cognitive science disciplines are not equally able to provide answers to ontological questions about the mind but rather that only neurophysiology and cultural psychology are suited to answer these questions However since the cultural account of mind has long been ignored in favor of the neurophysiological account Erneling and Johnson bring together contributions that focus especially on different versions of the cultural account of the mind

Presti, 2018-10-02 Among the most profound questions we confront are the nature of what and who we are as conscious beings and how the human mind relates to the rest of what we consider reality For millennia philosophers scientists and religious thinkers have attempted answers perhaps none more meaningful today than those offered by neuroscience and by Buddhism The encounter between these two worldviews has spurred ongoing conversations about what science and Buddhism can teach each other about mind and reality In Mind

Beyond Brain the neuroscientist David E Presti with the assistance of other distinguished researchers explores how evidence for anomalous phenomena such as near death experiences apparent memories of past lives apparitions experiences associated with death and other so called psi or paranormal phenomena including telepathy clairvoyance and precognition can influence the Buddhism science conversation Presti describes the extensive but frequently unacknowledged history of scientific investigation into these phenomena demonstrating its relevance to questions about consciousness and reality The new perspectives opened up if we are willing to take evidence of such often off limits topics seriously offer significant challenges to dominant explanatory paradigms and raise the prospect that we may be poised for truly revolutionary developments in the scientific investigation of mind Mind Beyond Brain represents the next level in the science and Buddhism dialogue

Philosophy for Everyone Matthew Chrisman,Duncan Pritchard,Guy Fletcher,Jane Suilin Lavelle,Elinor Mason,Michela Massimi,Alasdair Richmond,Dave Ward,2013-08-29 Philosophy for Everyone begins by explaining what philosophy is before exploring the questions and issues at the foundation of this important subject Key topics and their areas of focus include Epistemology what our knowledge of the world and ourselves consists in and how we come to have it Philosophy of Science foundational conceptual issues in scientific research and practice Philosophy of Mind what it means for something to have a mind and how minds should be understood and explained Moral Philosophy the nature of

The Metaphysics of Science and Aim-Oriented Empiricism Nicholas Maxwell,2019-03-09 This book gives an account of work that I have done over a period of decades that sets out to

solve two fundamental problems of philosophy the mind body problem and the problem of induction Remarkably these revolutionary contributions to philosophy turn out to have dramatic implications for a wide range of issues outside philosophy itself most notably for the capacity of humanity to resolve current grave global problems and make progress towards a better wiser world A key element of the proposed solution to the first problem is that physics is about only a highly specialized aspect of all that there is the causally efficacious aspect Once this is understood it ceases to be a mystery that natural science says nothing about the experiential aspect of reality the colours we perceive the inner experiences we are aware of That natural science is silent about the experiential aspect of reality is no reason whatsoever to hold that the experiential does not objectively exist A key element of the proposed solution to the second problem is that physics in persistently accepting unified theories only thereby makes a substantial metaphysical assumption about the universe it is such that a unified pattern of physical law runs through all phenomena We need a new conception and kind of physics that acknowledges and actively seeks to improve metaphysical presuppositions inherent in the methods of physics The problematic aims and methods of physics need to be improved as physics proceeds These are the ideas that have fruitful implications I set out to show for a wide range of issues for philosophy itself for physics for natural science more generally for the social sciences for education for the academic enterprise as a whole and most important of all for the capacity of humanity to learn how to solve the grave global problems that menace our future and thus make progress to a better wiser world It is not just science that has problematic aims in life too our aims whether personal social or institutional are all too often profoundly problematic and in urgent need of improvement We need a new kind of academic enterprise which helps humanity put aims and methods improving meta methods into practice in personal and social life so that we may come to do better at achieving what is of value in life and make progress towards a saner wiser world This body of work of mine has met with critical acclaim Despite that astonishingly it has been ignored by mainstream philosophy In the book I discuss the recent work of over 100 philosophers on the mind body problem and the metaphysics of science and show that my earlier highly relevant work on these issues is universally ignored the quality of subsequent work suffering as a result My hope in publishing this book is that my fellow philosophers will come to appreciate the intellectual value of my proposed solutions to the mind body problem and the problem of induction and will as a result join with me in attempting to convince our fellow academics that we need to bring about an intellectual institutional revolution in academic inquiry so that it takes up its proper task of helping humanity learn how to solve problems of living including global problems and make progress towards as good as wise and enlightened a world as possible

Great Minds Balazs Hargittai, Magdolna Hargittai, Istvan Hargittai, 2014-05-01 Throughout the 1990s and the 2000s Istvan Balazs and Magdolna Hargittai conducted hundreds of interviews with leading scientists in physics chemistry materials and biomedical research These interviews appeared in a variety of publications including Chemical Intelligencer Mathematical Intelligencer and Chemical Heritage In four thousand pages of interviews the Hargittais had

conversations with over a hundred Nobel laureates along with many other top minds and personalities in various scientific fields. Now in a single volume the Hargittais have gathered the best and most notable moments of these interviews creating a survey of the past, present and future of science as told by some of the most influential members of many scientific disciplines. Figures like James D. Watson, Francis Crick and Glenn T. Seaborg share their thoughts in these pages in a collection that includes 68 Nobel Laureates. Without exaggeration their backgrounds come from all over the globe: scientists from the United States, the United Kingdom, Canada, France, Germany, Israel, Russia, Sweden, Switzerland, and Taiwan are featured. These interviews discuss many of the most prominent debates and issues in today's scientific climate. *Great Minds* is a synthesis of scientific thought as told by some of the most notable scientists of the twentieth and twenty-first centuries.

What is Philosophy of Mind? Tom McClelland, 2021-04-13. We all have minds but what exactly is a mind? Is your mind the same thing as your brain? How does what's happening in your mind cause your behaviour? Can you know what's going on in other people's minds? Can you even be sure what's going on in your own? Are babies conscious? How about cats? Or self-driving cars? Philosophy of mind grapples with questions like these, exploring who we are and how we fit into the world. In this student-friendly guide, McClelland introduces the key ideas in philosophy of mind, showing why they matter and how philosophers have tried to answer them. He covers the major historical moments in philosophy of mind, from Descartes and his troubles with immaterial souls up to today's consciousness wars. Additionally, he examines the implications that philosophy of mind has for psychology, artificial intelligence, and even particle physics. McClelland lays out the centuries-long dialogue between philosophy and science, presenting a uniquely grounded, practical picture of the field for students. Rich with real-world examples and written for the absolute beginner, *What is Philosophy of Mind* gives students the tools to delve deeper into this dynamic field of philosophy.
