current state of America's high schools focusing on new research about reforming these institutions that are so important in the lives of the nation's adolescents. The questions considered reflected the diversity of the participants and covered a variety of areas: historical, international, sociological, and practical. Data gathered by the U.S. Department of Education show students today are taking many more advanced courses in mathematics and the sciences while at the same time test scores do not reflect the increases in enrollments in academic courses. In addition, large score gaps remain among students from different social groups. Reform of the high schools must take into account the elementary and middle schools that prepare students and the postsecondary institutions to which students aspire. Adolescent culture and students' views about school and academic work play important roles in student achievement as do the family and contemporary society in shaping of adolescent behavior. No matter their background, all participants agreed that the key to a successful high school rests with the extent to which it recognizes and strengthens its commitment to the intellectual growth of its students.
