Detection and Estimation of Working Memory States and Cognitive Functions Based on Neurophysiological Measures
Felix Putze, Christian Mühl, Fabien Lotte, Stephen Fairclough, Christian Herff, 2019-02-05 Executive cognitive functions like working memory determine the success or failure of a wide variety of different cognitive tasks such as problem solving navigation or planning Estimation of constructs like working memory load or memory capacity from neurophysiological or psychophysiological signals would enable adaptive systems to respond to cognitive states experienced by an operator and trigger responses designed to support task performance e g by simplifying the exercises of a tutor system when the subject is overloaded or by shutting down distractions from the mobile phone The determination of cognitive states like working memory load is also useful for automated testing assessment or for usability evaluation While there exists a large body of research work on neural and physiological correlates of cognitive functions like working memory activity fewer publications deal with the application of this research with respect to single trial detection and real time estimation of cognitive functions in complex realistic scenarios Single trial classifiers based on brain activity measurements such as electroencephalography functional near infrared spectroscopy physiological signals or eye tracking have the potential to classify affective or cognitive states based upon short segments of data For this purpose signal processing and machine learning techniques need to be developed and transferred to real world user interfaces The goal of this Frontiers Research Topic was to advance the State of the Art in signal based modeling of cognitive processes We were especially interested in research towards more complex and realistic study designs for example collecting data in the wild or investigating the interaction between different cognitive processes or signal modalities Bringing together many contributions in one format allowed us to look at the state of convergence or diversity regarding concepts methods and paradigms *Machine Learning and Python for Human Behavior, Emotion, and Health Status Analysis* Md Zia Uddin, 2024-08-30 This book is a practical guide for individuals interested in exploring and implementing smart home applications using Python Comprising six chapters enriched with hands on codes it seamlessly navigates from foundational concepts to cutting edge technologies balancing theoretical insights and practical coding experiences In short it is a gateway to the dynamic intersection of Python programming smart home technology and advanced machine learning applications making it an invaluable resource for those eager to explore this rapidly growing field Key Features Throughout the book practicality takes precedence with hands on coding examples accompanying each concept to facilitate an interactive learning journey Striking a harmonious balance between theoretical foundations and practical coding the book caters to a diverse audience including smart home enthusiasts and researchers The content prioritizes real world applications ensuring readers can immediately apply the knowledge gained to enhance smart home functionalities Covering Python basics feature extraction deep learning and XAI the book provides a comprehensive guide offering an overall understanding of smart home applications **Unlocking the Healing Code** Bruce Forciea, 2007 Whether the

Handbook of AI in Engineering Applications Ajay Kumar, Sangeeta Rani, Krishna Dev Kumar, Manish Jain, 2025-08-12 There is a need to categorize artificial intelligence AI applications tools techniques and algorithms based on their intended use in various design stages Specifically there is a need to explore AI techniques that are utilized for tasks such as designing including but not limited to inspiration idea and concept generation concept evaluation optimization decision making and modeling This includes things like generating ideas and concepts evaluating those ideas optimizing designs making decisions and creating models This handbook brings all of these categories with compatible AI techniques tools and algorithms together in one place Handbook of AI in Engineering Applications Tools Techniques and Algorithms covers applications of AI in engineering and highlights areas such as future cities mechanical system analysis and robotic process automation and presents the application of AI and the use of computerized systems that aim to simplify and automate the processes of design and construction of civil works The handbook discusses the design and optimization of mechanical systems and parts such as engines gears and bearings which can be automated using AI and it explores the performance of robotics and automation systems which can be simulated and analyzed using AI to forecast behavior spot future issues and suggest changes Rounding out this handbook is AI technology automation and how analyzing relevant data can provide a reliable basis for relevant personnel to carry out their work This handbook fills the gap between R D in AI and will benefit all stakeholders including industries professionals technologists

academics research scholars senior graduate students government and public healthcare professionals **Federated Learning and AI for Healthcare 5.0** Hassan, Ahdi, Prasad, Vivek Kumar, Bhattacharya, Pronaya, Dutta, Pushan, Damañevičius, Robertas, 2023-12-18 The Healthcare sector is evolving with Healthcare 5.0 promising better patient care and efficiency. However, challenges like data security and analysis arise due to increased digitization. Federated Learning and AI for Healthcare 5.0 offers solutions explaining cloud computing's role in managing data and advocating for security measures. It explores federated learning's use in maintaining data privacy during analysis, presenting practical cases for implementation. The book also addresses emerging tech like quantum computing and blockchain-based services, envisioning an innovative Healthcare 5.0. It empowers healthcare professionals, IT experts, and data scientists to leverage these technologies for improved patient care and system efficiency, making Healthcare 5.0 secure and patient-centric. AI and Ed George A. Goens, 2021-11-12 The United States has undergone several major transformations economically, politically, and socially. Today, the impact of artificial intelligence will bring another transformation affecting citizens' private lives as well as employment, communication, politics, and almost every other aspect of life. The question artificial intelligence raises is what kind of education will students need in confronting the obvious and projected impact of technology. Transformations affect obvious aspects of life but also raise significant issues that challenge values, ethics, and standards. The purpose of this book is to define the role of education and its goals, content, and approaches that will assist citizens in addressing the challenges the artificial intelligence movement brings to the life of citizens. Positive aspects of the transformation include communication, productivity, and other issues. However, there are hazards and downsides to artificial intelligence that must be addressed through an educated society. Education's role encompasses assisting individuals to address the positive and negative aspects of any creative intervention. Thinking coupled with insight into principles, ethics, and the meaning of life are critical. Education prepares individuals for changing times in order to protect their freedoms and democracy and find a life of purpose and meaning. **Tactics of Interfacing** Ksenia Fedorova, 2020-08-11 How digital technologies affect the way we conceive of the self and its relation to the world, considered through the lens of media art practices. In *Tactics of Interfacing*, Ksenia Fedorova explores how digital technologies affect the way we conceive of the self and its relation to the world. With the advent of ubiquitous computing, the self becomes an object of technological application increasingly defined by data received from tracking technologies. Subtly, these technologies encourage versions of ourselves that are easier to interpret computationally. Fedorova views these shifts in self-perception through the lens of contemporary media art practices, examining a range of artistic tactics that enable embodied and intimate experiences of machinic operations on our lives. At the center of Fedorova's analysis are the mechanisms that structure the relations between the self and the world at the level of the interface; she considers interfacing a process in which interrelation happens and different agencies play off against each other. She discusses such topics as interfaciality and the face as a medium, self-image, and the boundaries of the self understood through

technological mediation of an embodied experience the relation between the self and the other reshaped by algorithmic technologies and the augmentation and alteration of spatial perception The artworks Fedorova discusses present scenarios of interfacing that range from responsive environments to artificial intelligence conversational agents She shows that art and aesthetic experience offer fruitful ways to reflect on the effects of contemporary technological culture enabling encounters that shift our perspectives on the boundaries of the self and challenge the very capacity to feel human *Human-Computer Interaction.
