

CM921 WIRELESS PROGRAMMABLE THERMOSTAT

PRODUCT SPECIFICATION SHEET

The **CM921** thermostat is designed to provide automatic time and temperature control of heating or cooling systems in villas and apartments.

It can be used as part of a system in conjunction with combi-boilers, oil-burners and gas fired boilers, circulation pumps, thermal actuators, zone valves and electric heating systems (<10A). In combination with other **CM921** room units and **HC60NG** receivers it can be used to control multi-zone applications (up to 4 zones).

The radio frequency controlled **CM921** system pack consists of a room unit **CMT921A** and a relay box **R-6660D (HC60NG)**. No wiring to the room unit is required. The installer only needs to wire the relay box to the controlled device (e.g. boiler) and mount the room unit in a suitable location where RF communication is reliable. The **CM921** uses reliable RF communication technology in the 868MHz band.

The **CM921** extra large LCD display, dynamic text display and controls layout are identical to the **CM901** 'wired' thermostat. The unit is ideal for consumers who want reliable and precise temperature control from a modern looking, simple to program and easy-to-use product.
