*Key Technology*

Full HD 1080p There are a lot of ways to define high-definition but BRAVIA® Full HD means you're getting the best resolution that high-definition has to offer consumers. With Sony BRAVIA XBR HDTVs, Full HD 1080 means 1920 x 1080 pixels³ and 1080p video inputs. Near Midsize standard size best in high-definition and with BRAVIA Full HD 1080 products you get it.

1920 x 1080 Native Panel Resolution When it comes to high-definition TV the pinnacle of performance is achieved by using 1920 x 1080 display panels. Full HD 1080 x 1080 panel resolution with over 2 million pixels⁴ means more than twice that of 1280p HDTV resolution when you need to reproduce fine 1080p content that can be delivered by our cutting-edge 1080p Blu-ray Disc™ player.

10-bit Pixel Depth and 10-bit Colors While it's great to state that a TV is capable of creating billions of colors it's a whole lot better when you have a display that can actually display them. That's the logic behind Sony's 10-bit processor and 10-bit display. Sony follows 10-bit processing with a 10-bit panel, allowing it to have the benefit of color reproduction that a 10-bit panel should have. Translating it to another way means that color and subtle color changes are fully reproduced.

Motionflow™ LCD screens with Full HD 120 Hz refresh rates are a reality. Taking motion performance to the next level requires innovation and ingenuity. Enter Sony's Motionflow™ High Frame Rate technology. Motionflow™ refers to the incoming video signal and applies the appropriate processing for optimum motion reproduction. Taking full advantage of the source's 24fps encoded content available on DVD and Blu-ray Disc, Motionflow™ allows the viewer to see the action and between frames, sudden fast action, smoothly preserving the integrity of the original film. When 60fps content is detected, Motionflow™ adjusts the amount of frames and uses near 60fps calculation to create a new level of natural motion reproduction. Don't experience movies and sports with a greater sense of motion than ever before.

BRAVIA Engine™ PRO Full Digital Video Processor BRAVIA Engine™ PRO builds upon the BRAVIA Engine system's outstanding video processing functions making it Sony's most advanced video processing system. It is the culmination of our legendary picture quality expertise. Merging the latest generation of proprietary video processing technology: Digital Reality Creation™, Multi-Frame DRC-MT (DRC-MT2.0). This technology creates a high definition video signal that traditional televisions have never processed in a real-world. This latest generation of DRC-MT features increased processing power and provides a sharp, crystal clear image with both 480p and 480p standard definition and all high definition sources (up to and including 1080p). It also features "1080p Direct Creation" which minimizes loss in interface processing (by a generation by performing Digital Reality Creation and DRC-MT on the original source only).

Live Color Creation™ System featuring WCG-CCFL Many colors in the real-world such as deep reds, greens and other colors cannot be created by engineering with conventional display technology. Working in a synergy with the input of DRC-MT, Live Color Creation is a 10-bit DRC-MT on the optical engine in our HDTV HDTVs. Live Color Creation technology achieves wide color reproduction using advanced chroma signal processing systems. The primary benefits are color tones, natural greens and a overall wider color gamut for all scenes.

Advanced Contrast Enhancer (ACE) Function Sony's Active to Go input for video on DRC-MT is with our own excellent color reproduction performance of up to 10,000:1⁵. A Dynamic Contrast Ratio of up to 10,000:1⁵ is achieved by using real-time image processing to adjust the contrast along with reproducing the original image. But it doesn't stop there. The "Motionflow" technology is a real picture performance enhancing and processing tool to enhance detail and low level ACE technology to take care of the contrast of the image, as well as further enhance detail and contrast to give the difference that you can see.

RealColor™ technology BRAVIA® HDTV's performance has been called out for the most realistic color reproduction and defined by standards in the original color space, called the DC-P3. Thanks to the adoption of a newly developed international color standard called Rec. 709, the colors in the HDTV's image and what it displays are a lot more like the colors in the real world. Sony's RealColor technology
