

- (3) Up to two remote controllers can be connected to one group.
- When two remote controllers are connected to one group, always set the master remote controller and subordinate remote controller.
 - When only one remote controller is connected to one group, set it as the master controller. When two remote controllers are connected to one group, set the master remote controller and subordinate remote controller. (For a description of how to set the master/subordinate switch, see step 6 in section [\(4\) How To Install](#).)
- (4) Total length of remote controller wiring
- The remote controller can be wired up to 300 m. Purchase 0.3 to 1.25 mm², 2-core cable at the installation site.

4 How To Install

1. Choose a place in which to install the remote controller (switch box).

Be sure to observe the following steps:

- (1) Temperature sensors are provided with both the remote controller and the indoor units. When using the remote controller temperature sensor, the master remote controller detects the room temperature. Install the master remote controller in a place where the average room temperature can be detected and which is not affected by any heat source from direct sunlight or air blown from air conditioning units. (For how to set the master and subordinate remote controller, see step 6 in section [\(4\) How To Install](#). For how to set the temperature sensor, refer to the Free-Plan indoor unit installation manual. For Mr. Slim air conditioners, see section [\(6\) Function Selection](#) of this installation manual.)
- (2) When installing on either the switch box or the wall, allow extra space around the remote controller as shown in the figure at the right. (When using the remote controller in combination with a Program timer, refer to the Program timer installation manual.)

NOTE: Make sure that there is no wiring or wire near the remote controller sensor. If there is, the remote controller cannot detect the exact room temperature.

- (3) Parts which must be supplied on site.

- Switch box for two units
- Thin-copper wiring pipe
- Lock nut and bushing

Switch box (two units)

2. Seal the remote controller cord with putty in order to prevent the possible entry of dew, water droplets, cockroaches, other insects, etc.
- When using the switch box:**
- When installing on the switch box, seal the connections between the switch box and wiring pipe with putty.

When installing directly on the wall:

- When opening a hole using a drill for the remote controller cord (or when taking the cord out of the back of the remote controller), seal the hole with putty.
- When routing the cord via the portion cut off from the upper cover, similarly seal that portion with putty.

3. Remove the remote controller cover.

- Insert a minus screwdriver into one of the open slots and move the screwdriver in the arrow direction.

CAUTION Do not turn the screwdriver in the slot. Doing so may damage the slot.
