Thomas,Derek Raine,2018-10-08 Physics to a Degree provides an extensive collection of problems suitable for self study or tutorial and group work at the level of an undergraduate physics course This novel set of exercises draws together the core elements of an undergraduate physics degree and provides students with the problem solving skills needed for general physics examinations and for real life situations encountered by the professional physicist Topics include force momentum gravitation Bernoulli s Theorem magnetic fields blackbody radiation relativistic travel mechanics near the speed of light radioactive decay quantum uncertainty and much more **The Special Theory of Relativity** Helmut Günther,Volker Müller,2019-09-25 This book discusses in detail the special theory of relativity without including all the instruments of theoretical physics enabling readers who are not budding theoretical physicists to develop competence in the field An arbitrary but fixed inertial system is chosen where the known velocity of light is measured With respect to this system a moving clock loses time and a moving length

contracts The book then presents a definition of simultaneity for the other inertial frames without using the velocity of light To do so it employs the known reciprocity principle which in this context serves to provide a definition of simultaneity in the other inertial frames As a consequence the Lorentz transformation is deduced and the universal constancy of light is established With the help of a lattice model of the special theory of relativity the book provides a deeper understanding of the relativistic effects Further it discusses the key STR experiments and formulates and solves 54 problems in detail
