

SAFETY

To achieve highest operator safety, combined with ease of handling, the slide is labeled "DOUBLE ACTION ONLY". It has no manual safety and the hammer is never fully cocked.

The hammer is of a novel design. Compared to a conventional hammer, the slide is very light and consequently, operates at high velocities. It is driven by a powerful free floating extension spring. Furthermore, the hammer's mass is concentrated around its axis giving an inertia in the critical direction of the firing pin close to zero.

In its ready position the hammer is securely held by the hammer block. Only by deliberately pulling the trigger can the hammer block be disengaged. The sliding action of the barrel excludes firing unless the breech is fully locked. A direct blow to the hammer is impossible because of the slide and grip. The hammer's energy is transmitted to the firing pin through the hammer firing pin.

Malfunctioning

Proper function of your slide requires only the most common sense and care, and to the ammunition you use. There are a few more common causes of malfunctioning which may occur as follows:

Malfunctioning: Failure of the slide to lock back after firing. The slide may be jammed or it may fail to lock back. This is usually caused by a faulty magazine. The slide may also fail to lock back if the trigger was not fully pulled. The hammer is then dropped from the hammer block, when the trigger is pulled. The slide is then pulled. Be sure to allow the trigger to go fully forward after it has been pulled.

Failure to Feed: This occurs when a cartridge has been fed from a magazine but not fully

extracted. If this occurs, keep the firearm pointed in a safe direction, remove the magazine, remove the slide manually and continue shooting. If necessary change the magazine. The most common causes are dirt or foreign objects impeding the magazine.

Failure to Extract: A round does not fully extract from the chamber. The slide may be jammed or it may fail to lock back. This is usually caused by a faulty magazine. The slide may also fail to lock back if the trigger was not fully pulled. The hammer is then dropped from the hammer block, when the trigger is pulled. The slide is then pulled. Be sure to allow the trigger to go fully forward after it has been pulled.

DISASSEMBLY

Unload your pistol. Pull the slide back until the slide stop is locked open. Using the tip of a small screwdriver, push the slide stop into the slide, release the slide stop. Remove the barrel spring. Do not touch the barrel. Do not touch the slide.

ASSEMBLY

Insert the barrel spring into the hole in the slide. Push the slide onto the frame until the back lock is up with the grip. If the slide does not go on the frame easily make sure that the hammer is fully locked and that the barrel and recoil spring guide is centered. While pushing down on the top of the barrel, pull the slide back all the way, compressing the recoil springs, and push up on the slide stop to hold the slide in place. Lock into the assembly pin hole and align that hole with the cut in the barrel. Insert the assembly pin until it snaps into the spring. Pull the slide back a little to release the slide stop and release the slide. Work the slide a few times to check the action. Do not use the slide stop. Do not use the slide stop. Do not use the slide stop.
