provides a detailed exploration of Arabic mathematics and sciences in the ninth and tenth centuries. Extensive and detailed analyses and annotations support a number of key Arabic texts which are translated here into English for the first time. In this volume, Rashed focuses on the traditions of celebrated polymaths from the ninth and tenth centuries, the School of Baghdad, such as the Ban Mūsā, Thābit ibn Qurra, Ibn al-Haytham, Ibn Sīnā, Abū Ja'far al-Khwarizmi, Abū Sahl al-Buhārī, and the eleventh-century Andalusian mathematicians like Abū al-Qasim ibn al-Samh and al-Mu'taman ibn Hūd. The Archimedean and Apollonian traditions of these polymaths are thematically explored to illustrate the historical and epistemological development of infinitesimal mathematics as it became more clearly articulated in the eleventh century, the influential legacy of al-Hasan ibn al-Haytham (Alhazan). Contributing to a more informed and balanced understanding of the internal currents of the history of mathematics and the exact sciences in Islam and of its adaptive interpretation and assimilation in the European context, this fundamental text will appeal to historians of ideas, epistemologists, mathematicians at the most advanced levels of research.
