Cells, Teacher's Guide , Understanding Cancer J. Richard McIntosh, 2019-04-26 Understanding Cancer is a brand new undergraduate textbook for students without prior training in biology that integrates an introduction to cancer medicine with descriptions of the biological processes that go wrong to cause cancer's onset and progression. It also highlights the human side of cancer with stories of patients and loved ones touched by the disease, dealing with diagnosis, treatment, and the prospect of death, as well as the broader societal aspects of cancer and its prevention. Key discoveries that have improved our understanding of cancer are presented in sidebars. In spite of this diversity, the book maintains precision and simplicity in describing what is and is not known about cancer, describing the strengths and limitations of current treatments.

Principles of Molecular Oncology Miguel H. Bronchud, 2003-12-03 At the midpoint of the 20th century our knowledge of cancer was based on epidemiology and pathology and treatment consisted of surgery and radiation therapy At mid century Medawar and colleagues initiated the understanding of transplantation immunology Farber described the first use of an antifolate drug to treat leukemia and Jacobson and coworkers described the irradiation protection effect of spleen cells These observations opened the door to the development of chemotherapy and transplantation in the treatment of cancer Despite the rapid development of these new disciplines progress was usually based on empiric observations and clinical trials The rapid advances in molecular biology at the end of the 20th century mark a new era in our knowledge of cancer Molecular immunology molecular genetics molecular pharmacology and the Human Genome Project are in the process of providing a level of understanding of cancer undreamed of in the past Optimism is based on the firm belief that understanding at the molecular level will lead to better and earlier diagnosis to new forms of treatment and most importantly eventually to prevention of many types of cancer
