

At the conclusion of your Fischer esterification experiment, you obtained an IR spectrum of a carboxylic acid, an alcohol, and an ester.

- a. The carbonyl stretch of carboxylic acids and esters is located between $1750\text{--}1700\text{ cm}^{-1}$. Consider this statement taken from your lab manual: 'The force required to stretch or bend a bond is the function of the strength of the bond and the masses of the bonded atoms.' Explain the difference in wavenumbers between carbonyl and hydroxyl functional groups.
- b. Carboxylic acid functional groups have an O–H stretch located between $3500\text{--}2500\text{ cm}^{-1}$. Alcohols have an OH stretch located between $3650\text{--}3200\text{ cm}^{-1}$.
 - i. Draw hydrogen bonding interactions between two carboxylic acid molecules.
 - ii. Draw hydrogen bonding interactions between two alcohols.
 - iii. Consider the effects of hydrogen bonding on bond strength and use your illustrations to explain the difference in wavenumbers between the hydroxyl groups of a carboxylic acid and the hydroxyl group of an alcohol.
- c. Carboxylic acids have a carbonyl stretch located between $1725\text{--}1700\text{ cm}^{-1}$. Esters have a carbonyl stretch located between $1750\text{--}1730\text{ cm}^{-1}$. Consider the effects of hydrogen bonding, resonance, and inductive electron withdrawal on the bond strength of the carbonyl group of carboxylic acids and esters. Explain the difference in wavenumbers between the carbonyl stretch of a carboxylic acid and that of an ester.

Landmark Experiments in Protein Science Pascal Leclair,2023-07-31 Proteins are the workhorses of cells performing most of the important functions which allow cells to use nutrients and grow communicate among each other and importantly die if aberrant behavior is detected How were proteins discovered What is their role in cells How do dysfunctional proteins give rise to cancers Landmark Experiments in Protein Science explores the manner in which the inner workings of cells were elucidated with a special emphasis on the role of proteins Experiments are discussed in a manner as to understand what questions were being asked that prompted the experiments and what technical challenges were faced in the process and results are presented and discussed using primary data and graphs Key Features Describes landmark experiments in cell biology and biochemistry Discusses the How and Why of historically important experiments Includes primary original data and graphs Emphasizes biological techniques that help understand how many of the experiments performed were possible Documents chronologically how each result fed into the next experiments

Reaction Kinetics and the Development and Operation of Catalytic Processes G.F. Froment,K.C. Waugh,2001-04-03 Reaction Kinetics and the Development and Operation of Catalytic Processes is a trendsetter The Keynote Lectures have been authored by top scientists and cover a broad range of topics like fundamental aspects of surface chemistry in particular dynamics and spillover the modeling of reaction mechanisms with special focus on the importance of transient experimentation and the application of kinetics in reactor design Fundamental and applied kinetic studies are well represented More than half of these deal with transient kinetics a new trend made possible by recent sophisticated experimental equipment and the awareness that transient experimentation provides more information and insight into the microphenomena occurring on the catalyst surface than steady state techniques The trend is not limited to purely kinetic studies since the great majority of the papers dealing with reactors also focus on transients and even deliberate transient operation It is to be expected that this trend will continue and amplify as the community becomes more aware of the predictive potential of fundamental kinetics when combined with detailed realistic modeling of the reactor operation

Transportation Biofuels Alwin Hoogendoorn,Han van Kasteren,2020-04-06 The transportation industry is still largely reliant on fossil fuels whose use and extraction have significant environmental costs Biofuels produced from renewable resources biomass offer a more sustainable alternative However it is important that production methods should be energy efficient and that feedstocks should not compete with food sources Biofuels that meet these criteria are sometimes referred to as second generation biofuels The new edition of this book provides updates on the three previously discussed non conventional pathways for second generation biofuels including new experimental results and pilot plant studies It also includes a completely new chapter looking at developments in combining renewable electricity with fuel production and possible future directions for the transportation industry It is a
