Schillaci, Giuseppe Biondi-Zoccai, Ami E. Iskandrian, 2022-08-18 Performing any diagnostic test in medicine is always a matter of trying to get the condition of the patient diagnosed properly with the least effort exposure discomfort and at the same time with the lowest possible error probability Pre test probability is helpful but often imprecise effectively overestimating the patient's risk profile In a broader prevention objective the phases of a disease its onset progression and complications must be taken into account The negative predictive value which is so important has in turn its main limitation in identifying the healthy patient that is the one who does not belong to any cluster of patients in which we would act in terms of prevention In coronary syndromes the goal is instead to evaluate coronary heart disease from mild to more extensive and significant forms For this purpose it is necessary to use parameters that investigate different and complementary aspects stenosis ischemia the morphology of the atherosclerotic plaque metabolic processes in particular vitality and apoptosis the presence of inflammatory processes The possibility already present thanks to Hybrid Imaging of joining exams that study different aspects will allow the patient to be increasingly characterized not only from a diagnostic point of view but also from a prognostic and personalized therapeutic choice Manual of Environmental Microbiology Cindy H. [Fault Diagnosis of Nonlinear Systems Using a Hybrid Approach](#) Ehsan Sobhani-Tehrani, Khashayar Khorasani, 2009-06-22

The increasing complexity of space vehicles such as satellites and the cost reduction measures that have affected satellite operators are increasingly driving the need for more autonomy in satellite diagnostics and control systems. Current methods for detecting and correcting anomalies onboard the spacecraft as well as on the ground are primarily manual and labor intensive and therefore tend to be slow. Operators inspect telemetry data to determine the current satellite health. They use various statistical techniques and models, but the analysis and evaluation of the large volume of data still require extensive human intervention and expertise that is prone to error. Furthermore, for spacecraft and most of these satellites, there can be potentially unduly long delays in round trip communications between the ground station and the satellite. In this context, it is desirable to have an onboard fault diagnosis system that is capable of detecting, isolating, identifying, or classifying faults in the system without the involvement and intervention of operators. Toward this end, the principle goal here is to improve the efficiency, accuracy, and reliability of the trend analysis and diagnostics techniques through utilization of intelligent based and hybrid based methodologies.
