

## 2.1.1 Levels of Ecology

Ecology encompasses all the living and nonliving things around us. The study of ecology focuses on the interactions between and among these living things, their environment and the environment in affecting them. The problems of environmentalists disappear from their minds once they know levels of ecology. "Should they keep polluting when 'environmental' teachers' demand?" How scientists collect the most accurate data where their highest priority lies?"

When ecologists examine the interactions between organisms and their surroundings, they consider organisms as environmental disciplines. From this knowledge, they can predict the behavior of the organisms within their environment. Scientists have been able to study many about the relationships between living things and the world in which they live.

# Ecological Levels of Organization

The ecological organization begins at the atom, is a large, complex living organism and includes things that affect and influence organisms. It is the study of the ecological levels of organization.

The ecological levels of living things and the areas in which they live are the ecological levels of organization, starting with the atom, then the cell and the organism.
