Pandey, Colin J. Henderson, Yuji Ishii, Michel Kranendonk, Wayne L. Backes, Ulrich M. Zanger, 2018-06-20 Genetic variations may change the structure and function of individual proteins as well as affect their interactions with other proteins and thereby impact metabolic processes dependent on protein protein interactions For example cytochrome P450 proteins which metabolize a vast array of drugs steroids and other xenobiotics are dependent on interactions with redox and allosteric partner proteins for their localization stability catalytic function and metabolic diversity reactions Genetic variations may impact such interactions by changing the splicing and or amino acid sequence which in turn may impact protein topology localization post translational modifications and three dimensional structure More generally research on single gene defects and their role in disease as well as recent large scale sequencing studies suggest that a large number of genetic variations may contribute to disease not only by affecting gene function or expression but also by modulating complex protein interaction networks The aim of this research topic is to bring together researchers working in the area of drug steroid and xenobiotic metabolism who are studying protein protein interactions to describe their recent advances in the field We are aiming for a comprehensive analysis of the subject from different approaches including genetics proteomics transcriptomics structural biology biochemistry and pharmacology Of particular interest are papers dealing with translational research describing the role of novel genetic variations altering protein protein interaction Authors may submit original articles reviews and opinion or hypothesis papers dealing with the role of protein protein interactions in health and

disease Potential topics include but are not limited to Role of protein protein interactions in xenobiotic metabolism by cytochrome P450s and other drug metabolism enzymes Role of classical and novel interaction partners for cytochrome P450 dependent metabolism which may include interactions with redox partners interactions with other P450 enzymes to form P450 dimers multimers P450 UGT interactions and proteins involved in posttranslational modification of P450s Effect of genetic variations mutations and polymorphisms on metabolism affected by protein protein interactions Structural implications of mutations and polymorphisms on protein protein interactions Functional characterization of protein protein interactions Analysis of protein protein interaction networks in health and disease Regulatory mechanisms governing metabolic processes based on protein protein interactions Experimental approaches for identification of new protein protein interactions including changes caused by mutations and polymorphisms

Strauss' Pharmacy Law and Examination Review, Second Edition Steven Strauss, 1990-06-30 **The Neuronal Functions of EF-hand Ca(2+)-binding Proteins 2nd Edition**

Michael R. Kreutz, José R. Naranjo, Karl-Wilhelm Koch, Beat Schwaller, 2016-11-01 Ca²⁺ signaling in neurons is characterized by highly restricted and dynamic gradients called Ca²⁺ waves spikes transients and puffs depending upon their corresponding spatial and temporal features Based on this strict segmentation the Ca²⁺ ion provides a versatile basis for complex signaling in neuronal subcompartments with a spatial resolution of micro and nanodomains The multitude of Ca²⁺ regulated processes requires specialized downstream processing machinery translating the Ca²⁺ signal into alterations of cellular processes The broad range of different Ca²⁺ triggered phenomena in neurons ranging from neurotransmission to gene expression is reflected by the existence of a multitude of different Ca²⁺ binding proteins CaBPs from which numerous belong to the EF hand super family EF hand proteins can be subdivided into Ca²⁺ buffer and Ca²⁺ sensor proteins Whereas the first group has a very high affinity for Ca²⁺ exhibits little conformational change in the Ca²⁺ bound state and is thought to mainly chelate Ca²⁺ the second group has a lower affinity for Ca²⁺ and shows considerable conformational changes upon Ca²⁺ binding which usually triggers a target interaction Neuronal calcium sensor NCS proteins and the related Caldendrin CaBP Calneuron nCaBPs proteins are members of this latter group They resemble the structure of their common ancestor Calmodulin CaM with four EF hand Ca²⁺ binding motifs of which not all are functional However despite their structural homology with CaM NCS as well as nCaBPs are quite diverse in amino acid sequence It is therefore surprising that relatively few binding partners have been identified that are not CaM targets and this raises the question of the specificity and function of these interactions In terms of function binding of NCS and nCaBP has frequently different consequences than binding of CaM which substantially increases the versatility of the Ca²⁺ tool kit The general idea of this special issue is to provide an overview on the function of neuronal EF hand calcium binding proteins in health and disease But we will not just provide a mere collection of articles to stress the function of each protein The issue will mainly deal with emerging concepts on Ca²⁺ signaling buffering mediated by EF hand Ca²⁺ binding proteins This includes questions like features that define the functional role of a EF hand calcium sensor in neurons the conditions that make physiological relevance of a given interaction of a CaBP with its target plausible the emerging synaptic role of these proteins and mounting evidence for their role in the regulation of

protein trafficking Structural aspects and biophysical studies will be covered Another aspect will be the role of CaBPs in brain disease states This aspect includes studies showing that CaBPs are targets of drugs in clinical use studies showing that expression levels of calcium binding proteins are frequently altered in brain disease states as well as reports on mutations in EF hand calcium sensors linked to human disease *The Massachusetts General Hospital Handbook of Cognitive Behavioral Therapy* Susan E. Sprich,Timothy Petersen,Sabine Wilhelm,2023-07-18 This book provides a fully updated in depth overview of Cognitive Behavioral Therapy CBT which is the most widely disseminated evidence based psychotherapy utilized today The Massachusetts General Hospital Handbook of Cognitive Behavioral Therapy 2nd edition displays the constantly evolving nature of CBT due to the continuous research trials conducted by clinicians This second edition presents updated information and literature to reflect the current clinical guidelines based on research studies that have been published in the past few years Chapters cover applying CBT to common disorders such as depression obsessive compulsive disorder and anxiety disorders as well as more specialized applications such as schizophrenia Chapters also provide information on how to tailor CBT for specific populations and in specific settings The book also features new chapters on the use of technology in treating psychiatric disorders and novel models of care and treatments for psychiatric disorders The fully updated and expanded second edition of The Massachusetts General Hospital Handbook of Cognitive Behavioral Therapy will continue to be a go to resource for all psychiatrists psychologists social workers licensed mental health counselors primary care doctors graduate students and psychiatry residents and fellows implementing cognitive behavioral therapy in their clinical practice
