Food for Life F. Deatherage, 2013-06-29 This book is addressed to the university student who is not a science major and to the general reader An attempt is made to present an integrated view of some of the basic concepts of physical biological and social sciences relevant to the problem of providing people with food The application of these disciplines has led to our present technologies of medicine agriculture and food science on which modern civilization rests Technical information concerning foods has increased enormously in the less than a century that the basic concepts of the science of nutrition have been recognized Scientific agriculture to provide food for an ever growing population is scarcely a century and a half old Feeding oneself is a very personal matter and at the same time feeding large groups is the concern of society as a whole Therefore it is understandable that in one way or another the problems of food production and distribution underlie the actions of politicians bureaucrats the leaders of government and business managers These situations of our modern life make rational and sound solutions to food problems difficult and often contribute to alarmism founded on partial scientific truth taken out of context The trend toward more consumerism is unmistakable But to serve the individual best such movements must be based on sound judgments and reasoned scientific principles rather than on the often emotional compromises of opportunistic politicians lawyers and businessmen That man requires wholesome nutritious food is indisputable
