remembered Since emotions are central to daily functioning and well being it is important to understand the extent to which aging affects the perception of attention to memory for as well as experience and regulation of emotions An early scientific view of how people s emotions are affected by aging argued that aging led to a deterioration of emotional function This theory represented by for example Carl Jung 1875 1961 claimed that old age is a period of life when people feel an increased emotional sameness and less emotional energy According to this scientific view the aging emotional landscape was bleached barren and flattened Current psychological research however shows that emotion is rather a psychological domain that is relatively unaffected by the aging process or even improves with age in contrast to most cognitive functions For example even though there is evidence that aging is associated with deficits in emotion recognition various emotional functions seem to remain intact or become better with age such as the ability to regulate one s emotions or the extent of experiencing positive emotions However more research is needed to determine brain and behavior related quantitative and qualitative age related changes of different aspects of emotion processing and emotional functioning In the current Frontiers research topic we aim to present exciting new findings related to the effects of healthy aging on both more perceptually driven bottom up as well as more cognitively driven top down aspects of emotions In particular questions such as the following need to be raised and addressed What neural and behavioral processes are underlying age differences in emotion perception and memory for emotional information Are there differences between how older and younger adults experience and regulate their emotions and what drives these differences Is there a gradual reduction or more of a qualitative change of our emotional experiences over the life cycle from the turbulent childhood and youth to the mellower old age And what aspects of age related changes in emotional processing can be explained by age related changes in the brain and which are more affected by other factors such as changes in other body systems in experiential processes or in overall life goals National Union Catalog, 1982,1983 **Four Walls and a Roof** Reinier de Graaf,2017-09-25 A Financial Times Best Book of the Year A Guardian Best Architecture Book of the Year Sharp revealing funny The Guardian An original and even occasionally hilarious book about losing ideals and finding them again De Graaf deftly shows that architecture cannot be better or more pure than the flawed humans who make it The Economist Architecture we like to believe is an elevated art form that shapes the world as it pleases Four Walls and a Roof turns this fiction on its head offering a candid account of what it s really like to work as an architect Drawing on his own tragicomic experiences in the field Reinier de Graaf reveals the world of contemporary architecture in vivid snapshots from the corridors of wealth in London Moscow and Dubai to the demolished hopes of postwar social housing in New York and St Louis We meet ambitious oligarchs developers for whom architecture is nothing more than an investment and layers of bureaucrats consultants and mysterious hangers on who lie between any architect s idea and the chance of its execution This is a book about power money and influence and architecture s complete lack of any of them Witty insightful and funny it is a sometimes painful dissection of a profession that thinks it is still in control Financial Times This is the most
