Frontiers Of Intelligent Control And Information Processing:

Frontiers Of Intelligent Control And Information Processing Derong Liu, Cesare Alippi, Dongbin Zhao, Huaguang Zhang, 2014-08-13 The current research and development in intelligent control and information processing have been driven increasingly by advancements made from fields outside the traditional control areas into new frontiers of intelligent control and information processing so as to deal with ever more complex systems with ever growing size of data and complexity As researches in intelligent control and information processing are taking on ever more complex problems the control system as a nuclear to coordinate the activity within a system increasingly need to be equipped with the capability to analyze and reason so as to make decision This requires the support of cognitive components and communication protocol to synchronize events within the system to operate in unison In this review volume we invited several well known experts and active researchers from adaptive approximate dynamic programming reinforcement learning machine learning neural optimal control networked systems and cyber physical systems online concept drift detection pattern recognition to contribute their most recent achievements into the development of intelligent control systems to share with the readers how these inclusions helps to enhance the cognitive capability of future control systems in handling complex problems This review volume encapsulates the state of art pioneering works in the development of intelligent control systems Proposition and evocations of each solution is backed up with evidences from applications could be used as references for the consideration of decision support and communication components required for today intelligent control systems

Multiagent Systems Magdi S. Mahmoud, 2020-03-20 Multiagent systems MAS are one of the most

exciting and the fastest growing domains in the intelligent resource management and agent oriented technology which deals with modeling of autonomous decisions making entities Recent developments have produced very encouraging results in the novel approach of handling multiplayer interactive systems In particular the multiagent system approach is adapted to model control manage or test the operations and management of several system applications including multi vehicles microgrids multi robots where agents represent individual entities in the network Each participant is modeled as an autonomous participant with independent strategies and responses to outcomes They are able to operate autonomously and interact pro actively with their environment In recent works the problem of information consensus is addressed where a team of vehicles communicate with each other to agree on key pieces of information that enable them to work together in a coordinated fashion The problem is challenging because communication channels have limited range and there are possibilities of fading and dropout The book comprises chapters on synchronization and consensus in multiagent systems It shows that the joint presentation of synchronization and consensus enables readers to learn about similarities and differences of both concepts It reviews the cooperative control of multi agent dynamical systems interconnected by a communication network topology Using the terminology of cooperative control each system is endowed with its own state variable and dynamics A fundamental problem in multi agent dynamical systems on networks is the design of distributed protocols that guarantee consensus or synchronization in the sense that the states of all the systems reach the same value It is evident from the results that research in multiagent systems offer opportunities for further developments in theoretical simulation and implementations This book attempts to fill this gap and aims at presenting a comprehensive volume that documents theoretical aspects and practical applications

 Optimizing control schemes is critical to fully exploit the potential of industrial and daily use robots Usually accuracy and
 repeatability are measured to evaluate the performance of a robot and deviation of the two parameters from normal status
