\*The fuel signals reported by the Ford F-150 differed from the other vehicles included in this study. Each of the other vehicles reported a signal allowing for a highly accurate evaluation of fuel used. Fuel usage for the Ford F-150 was calculated using a different method and the results may be less accurate.

Average driving speed was approximately 46 km/h for all models in all tests.

On average, towing fuel consumption rose by 32% compared to the payload test, and payload fuel consumption rose by 8% over the empty test (not including the Ford F-150).

Idle time for the towing test increased by 17% for the GMC Silverado and 14% for the Toyota Tundra compared to the payload test. This may have reduced the expected fuel consumption in the towing test.
