

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- [I] Circles are females and squares are males.
- [II] A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person I - 1. Then answer the questions below the table.

What do you know about the genotype of the mother of I-1?

These parents (I-1 and an color blind man [I-2]) the had five children, but color blind males from his mother. Since the mother is not shaded she must be a carrier.

Number II individuals just like his father. Since males can't get his allele for color blindness.

Yes, because I-2's allele for color blindness from his mother. Must because that I-2's inheritance from his father.

Number number II and II were color blind. How many have color blindness [X^bY]

That mother I-1 is a carrier for color blindness.

What must be the genotype of the parents of a color blind daughter? Explain.

To have a color blind daughter, she must have the recessive allele from each parent. Her father must be X^bY and mother must have to be X^bX^b.

If mother II-3 has a normal son, what is the probability that their son will be color blind?

$X^B X^B \times X^B Y \rightarrow$ all of their sons will not be color blind.

(normal)

Genetics Practice Problems Pedigree Tables Key
