Current Topics in Human Genetics Hong-wen Deng, 2007 Analogies play a fundamental role in science To understand how and why at a given moment a certain analogy was used one has to know the specific historical circumstances under which the new idea was developed This historical background is never presented in scientific articles and quite rarely in books For the general reader the undergraduate or graduate student who learns the subject for the first time but also for the practitioner who looks for inspiration or who wants to understand what his colleague working in another field does these historical circumstances can be fascinating and useful This book discusses a series of analogy effects in subatomic physics the prediction and theory of which the author has contributed to in the last 50 years These phenomena are presented at a level accessible to the non specialist without formulae but with emphasis on the personal and historical background memoirs of meetings discussions and correspondence with collaborators and colleagues As such besides its scientific aspects the book constitutes an absorbing witness account of a holocaust survivor who subsequently illegally crossed the Iron Curtain to escape communist persecution UCSF General Catalog University of California, San Francisco, 1985

Reddy, Bonnie TuSmith, 2002 Winner of the 2003 American Educational Studies Association Critics Choice Awards Winner of the 2003 Gustavus Myers Outstanding Book Award Did affirmative action programs solve the problem of race on American college campuses as several recent books would have us believe If so why does talking about race in anything more than a superficial way make so many students uncomfortable Written by college instructors from many disciplines this volume of essays takes a bold first step toward a nationwide conversation Each of the twenty nine contributors addresses one central question what are the challenges facing a college professor who believes that teaching responsibly requires an honest and searching examination of race Professors from the humanities social sciences sciences and education consider topics such as how the classroom environment is structured by race the temptation to retreat from challenging students when faced with possible reprisals in the form of complaints or negative evaluations the implications of using standardized evaluations in faculty tenure and promotion when the course subject is intimately connected with race and the varying ways in which white faculty and faculty of color are impacted by teaching about race **Bioethics in Singapore** John Elliott, W. Calvin Ho, Sylvia S. N. Lim, 2010 This book provides an analysis of the ways in which the BAC has established an ethical framework for biomedical research in Singapore following the launch of the Biomedical Sciences Initiative by the Singapore Government The editors and authors have an intimate knowledge of the working of the BAC and the focus of the book includes the ways in which international forces have influenced the form and substance of bioethics in Singapore Together the authors offer a comparative account of the institutionalisation of biomedical research ethics in Singapore considered in the wider context of international regulatory efforts The book reviews the work of the BAC by placing it within the broader cultural social and political discourses that

have emerged in relation to the life sciences since the turn of the 21st century This book is not primarily intended to be a retrospect or an appraisal of the contribution of the BAC though this is one aspect of it Rather the main intention is to make a substantive contribution to the rapidly emerging field of bioethics Ethical discussions in the book include consideration of stem cell research and cloning genetics and research with human participants and focus on likely future developments as well as the past Many of the contributors of the book have been personally involved in this work and hence they write with an authoritative first hand knowledge that scholars in bioethics and public policy may appreciate As indicated above the book also explains the way in which ethics and science international and local have interacted in a policy setting Scholars and policy makers may find the Singaporean experience to be a valuable resource as the approach has been to make the ethical governance of research in Singapore consistent with international best practice while observing the requirements of a properly localised application of universally accepted principles In addition at least three chapters the first three chapters in particular are accessible to the lay reader interested in the development of bioethics and biomedical sciences both inside and outside Singapore from 2000 the year in which the BAC was established Both scholars and interested lay readers are therefore likely to find this publication a valuable reference
