

SPACING Rules of Graphic Design

1. Insert a single space after all punctuation.

There should be a single space after all punctuation (except hyphens). There are very few exceptions, most of which are papers formatted for scientific use.

There should be a single space after all punctuation (except hyphens). There are very few exceptions, most of which are papers formatted for scientific use.

15. Body copy should be flush left/ragged right or full justification without rivers.

When using flush left alignment, avoid uneven and unusually shaped gaps. When full justification, close attention must be paid to keep hyphenation to a minimum while simultaneously avoiding rivers. Rivers are excessive spaces between words.

A paragraph that is roughly aligned with most body copy is shown to the right. Notice that the paragraph is not perfectly aligned with the body copy. This is due to the fact that the paragraph is not perfectly aligned with the body copy.

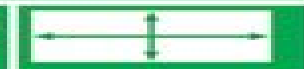

16. Proper paragraph indentation is the size of an em space.

Using the tab button to indent paragraphs creates a large, uniform space. Instead, an em space should be used. An em space is the size of a capital M. Either indentation or spacing should be used to create new paragraphs, never both. Design for web should use spacing rather than indentation. Never indent the first paragraph of a story or section. A drop cap may be used to start an article, but coordinated typographic should be considered in order to maintain proper letter spacing.

17. Margins should always be changed from the default settings.

Margins that have not been changed are easily noticed and are too basic for professional graphic designing. Usually a margin is larger on the bottom and outside than the top and the inside. The outside margin is called thumb space because it is where the magazine is held.

18. Leading must be adjusted for clarity.

Leading is the space between lines and should be adjusted based on the typeface and type size. When a paragraph is viewed at a distance, it should be a mid-brightness gray. If the body copy is too dark, it becomes figure. If the body copy is too light, it becomes ground.

19. Large text requires kerning.

Kerning is adjusting the space between letters. Headlines and other instances of large text require kerning because the large size amplifies the space between letters and can make the text appear awkward. Kerning is more of an art than a science but letter spacing should be uniform throughout. Special attention should be paid to letters that set up a large amount of space or form a large existing CONJO.

20. Tracking over +/- 5 should be avoided.

Tracking is letter spacing throughout a document. Tracking should generally be avoided but there are some instances where it is necessary, such as all caps and small caps. Tracking can also be used to improve the spacing of lines within full justification to avoid rivers.

22. Lines must start at the same place across all columns.

Whenever there are multiple columns in a document, the bottom of each line should start at the same place across each column. This is especially true in the bottom of any column that does not end the article. Subheadings can be adjusted to avoid breaking the baseline grid.

BASILINE GRIDS

A baseline grid is a series of horizontal lines that span the width of the page. The lines are spaced at regular intervals and are used to align text and other elements. This ensures that all lines of text start at the same place across all columns, creating a clean and professional look.

25. Avoid widows and orphans.

Never allow one line of a paragraph to start or end a column; these are called widows. Always keep at least two lines together. Never end a paragraph with a single word or keep a line with less than six characters; these are called orphans.

DO ALL WORDS END EXACTLY?

Yes, No, Maybe

26. Proper line length is around 40 characters.

Maximum line length is approximately 27 characters, optimum line length is around 20 characters, and minimum line length is about 20 characters. This helps maintain the legibility of the text and keeps the reader from getting lost in the article. Images should be wrapped evenly in text and should never be embedded within a single column's width.
