## June 2014 Predicted Paper :

Nostradamus 2014: Prediction, Modeling and Analysis of Complex Systems Ivan Zelinka, Ponnuthurai Nagaratnam Suganthan, Guanrong Chen, Vaclav Snasel, Ajith Abraham, Otto Rössler, 2014-06-09 The prediction of behavior of complex systems analysis and modeling of its structure is a vitally important problem in engineering economy and generally in science today Examples of such systems can be seen in the world around us including our bodies and of course in almost every scientific discipline including such exotic domains as the earth's atmosphere turbulent fluids economics exchange rate and stock markets population growth physics control of plasma information flow in social networks and its dynamics chemistry and complex networks To understand such complex dynamics which often exhibit strange behavior and to use it in research or industrial applications it is paramount to create its models For this purpose there exists a rich spectrum of methods from classical such as ARMA models or Box Jenkins method to modern ones like evolutionary computation neural networks fuzzy logic geometry deterministic chaos amongst others This proceedings book is a collection of accepted papers of the Nostradamus conference that has been held in Ostrava Czech Republic in June 2014 This book also includes outstanding keynote lectures by distinguished guest speakers Ren Lozi France Ponnuthurai Nagaratnam Suganthan Singapore and Lars Nolle Germany The main aim of the conference was to create a periodical possibility for students academics and researchers to exchange their ideas and novel research methods This conference establishes a forum for presentation and discussion of recent research trends in the area of applications of various predictive methods

**Prediction of Protein Secondary Structure** Andrzej Kloczkowski, Lukasz Kurgan, Eshel Faraggi, 2024-11-22 This second edition volume expands on the previous edition with updates on the latest methods resources and studies concerning analysis and prediction of various structural and functional aspects of proteins and ncRNAs The chapters in this book cover topics such as secondary structure characterization and prediction the use and impact of AI including AlphaFold large language models and deep neural networks in the protein structure prediction field methods and resources for the prediction of posttranslational modifications residue residue contacts subcellular localization intrinsic disorder protein ligand interactions and protein aggregation analysis of cryo EM data and analysis of noncoding RNAs in the context of human diseases Written in the highly successful Methods in Molecular Biology series format chapters include introductions and surveys of the respective topics list the necessary materials and methods cover step by step instructions on how to use predictive tools and interpret their results and provide tips on troubleshooting and avoiding known pitfalls Cutting edge and thorough Prediction of Protein Secondary Structure Second Edition is a valuable resource for anyone interested in understanding the dynamic and growing field of the protein structure prediction

*Attention, predictions and expectations, and their violation: attentional control in the human brain* Simone Vossel, Joy J. Geng, Karl J. Friston, 2015-05-20 In the burdened scenes of everyday life our brains must select from among many competing inputs for perceptual synthesis so that only the most relevant receive full attention and

irrelevant distracting information is suppressed At the same time we must remain responsive to salient events outside our current focus of attention and balancing these two processing modes is a fundamental task our brain constantly needs to solve Both the physical saliency of a stimulus as well as top down predictions about imminent sensations crucially influence attentional selection and consequently the response to unexpected events Research over recent decades has identified two separate brain networks involved in predictive top down control and reorientation to unattended events or oddball stimuli the dorsal and ventral fronto parietal attention systems of the human brain Moreover specific electrophysiological brain responses are known to characterize attentional orienting as well as the processing of deviant stimuli However many key questions are outstanding What are the exact functional differences between these cortical attention systems How are they lateralised in the two hemispheres How do top down and bottom up signals interact to enable flexible attentional control How does structural damage to one system affect the functionality of the other in brain damaged patients Are there sensory specific and supra modal attentional systems in the brain In addition to these questions it is now accepted that brain responses are not only affected by the saliency of external stimuli but also by our expectations about sensory inputs How these two influences are balanced and how predictions are formed in cortical networks or generated on the basis of experience dependent learning are intriguing issues In this Research Topic we aim to collect innovative contributions that shed further light on the cortical mechanisms of attentional control in the human brain In particular we would like to encourage submissions that investigate the behavioural correlates functional anatomy or electrophysiological markers of attentional selection and reorientation Special emphasis will be given to studies investigating the context sensitivity of these attentional processes in relation to prior expectations trial history contextual cues or physical saliency We would like to encourage submissions employing different research methods psychophysical recordings neuroimaging techniques such as fMRI MEG EEG or ECoG as well as neurostimulation methods such as TMS or tDCS in healthy volunteers or neurological patients Computational models and animal studies are also welcome Finally we also welcome submission of meta analyses and reviews articles that provide new insights into or conclusions about recent work in the field

[Link Prediction in Social Networks](#) Srinivas Virinchi,Pabitra Mitra,2016-01-22 This work presents link prediction similarity measures for social networks that exploit the degree distribution of the networks In the context of link prediction in dense networks the text proposes similarity measures based on Markov inequality degree thresholding MIDTs which only consider nodes whose degree is above a threshold for a possible link Also presented are similarity measures based on cliques CNC AAC RAC which assign extra weight between nodes sharing a greater number of cliques Additionally a locally adaptive LA similarity measure is proposed that assigns different weights to common nodes based on the degree distribution of the local neighborhood and the degree distribution of the network In the context of link prediction in dense networks the text introduces a novel two phase framework that adds edges to the sparse graph to forma boost graph
