

Energy Emissions

Renewable energy sources

Renewable energy comes from energy sources that are continually replenished through the cycles of nature. Unlike fossil fuels (gas, coal, oil) their supply will never be exhaustive.

Wind Energy

Source/origin:

- Energy that travels in the wind can be captured and converted to electricity.
- This is done using large wind turbines (on land or offshore)
- The energy in the wind turns two or three propeller like blades around a rotor.
- The rotor is connected to the main shaft, which spins a generator to create electricity.

Advantage:

- Clean, does not pollute the air or produce greenhouse gases.
- Renewable and wind is free!

Disadvantage:

- Some wind turbines are very noisy especially if there are a good few together (wind farm)
- Electricity is only produced when wind blows.
