AIR FILTER**Inspect & Clean**

Remove the air filter element and inspect to ensure it is not excessively dirty, damaged or oily. If the element is a paper type element and it is contaminated with oil, replace it with a new air filter element.

Thoroughly clean the element housing of any dirt, dust, oil or any other contaminants. Use compressed air to blow any dust particles out of the filter element, blow from the inside of the filter element to the outside. Thoroughly clean the outside of the element, but do not blow the dust particles into the element from the outside.

OIL FILTER

The oil filter should be replaced every 10,000 Kilometres or 6 months whichever occurs first, or when the engine oil is contaminated in any way.

Replacement

1. Unscrew oil filter with a suitable oil filter wrench, then remove and discard.

2. Make sure seal is fitted correctly in recess in new filter.
 - a) Pour some clean engine oil into filter until level is approximately 2 cms below top of filter.
 - b) Smear some engine oil over filter seal.
 - c) Screw filter into place until seal contacts mating surface of adaptor, then tighten through a further 2/3 of a turn.

3. Clean any excess oil from filter and adaptor.
 - a) Check oil level, then start engine and check for oil leaks.
 - b) Repair as necessary.

◆ After running the engine, the oil level must be rechecked and oil added as necessary, to compensate for oil used to refill the oil filter.

COMPRESSION CHECK**1. Make sure of the following:**

- a) Engine is at operating temperature
