Technen: Elements of Recent History of Information Technologies with Epistemological Conclusions Andrzej Piotr Wierzbicki, 2014-07-25 The book expresses the conviction that the art of creating tools Greek techne changes its character together with the change of civilization epochs and co determines such changes This does not mean that tools typical for a civilization epoch determine it completely but they change our way of perceiving and interpreting the world There might have been many such epochs in the history of human civilization much more than the three waves of agricultural industrial and information civilization This is expressed by the title Technen of the book where n denotes a subsequent civilization epoch During last fifty years we observed a decomposition of the old episteme understood as a way of creating and interpreting knowledge characteristic for a given civilization epoch of modernism which was an episteme typical for industrial civilization Today the world is differently understood by the representatives of three different cultural spheres of strict and natural sciences of human and social sciences especially by their part inclined towards postmodernism and technical sciences that have a different episteme than even that of strict and natural sciences Thus we observe today not two cultures but three different episteme The book consists of four parts First contains basic epistemological observations second is devoted to selected elements of recent history of information technologies third contains more detailed epistemological and general discussions fourth specifies conclusions The book is written from the cognitive perspective of technical sciences with a full awareness and discussion of its differences from the cognitive perspective of strict sciences or human and social sciences The main thesis of the book is that informational revolution will probably lead to a formation of a new episteme The book includes discussions of many issues related to such general perspective such as what is technology proper what is intuition from a perspective of technology and of evolutionary naturalism what are the reasons for and how large are the delays between a fundamental invention and its broad social utilization what is the fundamental logical error using paradoxes that are not real only apparent of the tradition of sceptical philosophy what are rational foundations and examples of emergence of order out of chaos whether civilization development based on two positive feedbacks between science technology and the market might lead inevitably to a self destruction of human civilization etc

Death by Technology John R. Cook, 2021-01-11. This book refutes the 21st-century notion that advancing technology is an unambiguous social good and examines the effects of this uncritical acceptance and dependence. The author argues that technology has become the new religion for the digital age and that elevating technology to nearly the status of a deity allows for the denial of problems created by reliance upon machines. From the release of toxins into the environment to the unsustainable energy demands of the modern era, technological dependence is driving humanity near the brink of extinction. Despite these problems and existential issues such as artificial intelligence and the proliferation of nuclear weapons, many people have an unwavering belief in the ability of technology, particularly any device labeled smart, to create a perfect future while denying the history of unmet promises and unintended consequences of technological innovation. The author explores the psychological underpinnings of these beliefs from both a clinical and a cognitive perspective. The social and economic forces that maintain our reliance on, or addiction to, technology are critiqued, as are the ethical and security issues associated with the control of advanced technology.
