Evolvability Thomas F. Hansen, David Houle, Mihaela Pavlicev, Christophe Pélabon, 2023-06-27 Essays on evolvability from the perspectives of quantitative and population genetics evolutionary developmental biology systems biology macroevolution and the philosophy of science Evolvability the capability of organisms to evolve wasn't recognized as a fundamental concept in evolutionary theory until 1990 Though there is still some debate as to whether it represents a truly new concept the essays in this volume emphasize its value in enabling new research programs and facilitating communication among the major disciplines in evolutionary biology The contributors many of whom were instrumental in the development of the concept of evolvability synthesize what we have learned about it over the past thirty years They focus on the historical and philosophical contexts that influenced the emergence of the concept and suggest ways to develop a common language and theory to drive further evolvability research The essays drawn from a workshop on evolvability hosted in 2019-2020 by the Center of Advanced Study at the Norwegian Academy of Science and Letters in Oslo provide scientific and historical background on evolvability The contributors represent different disciplines of evolutionary biology including quantitative and population genetics evolutionary developmental biology systems biology and macroevolution as well as the philosophy of science This plurality of approaches allows researchers in disciplines as diverse as developmental biology molecular biology and systems biology to communicate with those working in mainstream evolutionary biology The contributors also discuss key questions at the forefront of research on evolvability Contributors J
