### **Mona Lisa Molecule Packet:**

*Math and the Mona Lisa* Bulent Atalay, 2011-09-20 Leonardo da Vinci was one of history's true geniuses equally brilliant as an artist, scientist, and mathematician. Readers of *The Da Vinci Code* were given a glimpse of the mysterious connections between math, science, and Leonardo's art. *Math and the Mona Lisa* picks up where *The Da Vinci Code* left off, illuminating Leonardo's life and work to uncover connections that until now have been known only to scholars. Bulent Atalay, a distinguished scientist and artist, examines the science and mathematics that underlie Leonardo's work, paying special attention to the proportions, patterns, shapes, and symmetries that scientists and mathematicians have also identified in nature. Following Leonardo's own unique model, Atalay searches for the internal dynamics of art and science, revealing to us the deep unity of the two cultures. He provides a broad overview of the development of science from the dawn of civilization to today's quantum mechanics. From this base of information, Atalay offers a fascinating view into Leonardo's restless intellect and *modus operandi*, allowing us to see the source of his ideas and to appreciate his art from a new perspective.

Embryogenesis Richard Grossinger, 2000 Embryogenesis is an unusual book in that it brings together a highly illustrated practical embryology book in simple language, perfect for health practitioners, with a fascinating read on the history and philosophy of biological science. It discusses the various stages of embryonic development: meiosis, fertilization, blastula development, and gastrulation, and then the embryology of each of the human organs and organ systems in detail. It puts each of them in context, both in terms of its phylogeny, the evolutionary trajectory of cell-organized systems on Earth, and its ontogeny, the formation of individual organisms in the modern world. There are 24 color plates, many of them commissioned uniquely for this volume, and several hundred black and white illustrations. The book is 950 pages, hardcover, 8 1/2 by 10. Chapters include: The Original Earth, The Materials of Life, The First Beings, The Cell, The Genetic Code, Sperm and Egg Fertilization, The Blastula, Gastrulation, Morphogenesis, Biological Fields, Chaos, Fractals, and Deep Structure, Ontogeny and Phylogeny, and Biotechnology, The Origin of the Nervous System, The Evolution of Intelligence, Neurulation and the Human Brain, Organogenesis, The Musculoskeletal and Hematopoietic Systems, Mind, The Origin of Sexuality and Gender, Healing, Transsexuality, Intersexuality, and the Cultural Basis of Gender, Self and Desire, Cosmogogenesis and Mortality. **Technology and Society** John Goyder, 1997 Technology and Society is a thoroughly researched, insightful sociological analysis of complex issues in the technology-society relationship. David Long, The King's University College. *Deutsche Bibliographie*, 1986.
