

### Lesson 7.81 Quadratic and Absolute Value Inequalities

- ✓ What methods are used to solve and graph quadratic inequalities?
- ✓ How are absolute value functions graphed?
- ✓ What methods are used to solve and graph absolute value inequalities?

Key Concepts	Practice
<ul style="list-style-type: none"> <li>One-variable quadratic inequalities: Set equal to zero, solve quadratic equation, test intervals.</li> <li>Two-variable quadratic inequalities: Graph the quadratic function and test a point to determine shaded region.</li> <li>Absolute Value inequalities: When <math> ax + b  &lt; c</math>, rewrite as <math>-c &lt; ax + b &lt; c</math>. When <math> ax + b  &gt; c</math>, rewrite as <math>ax + b &lt; -c</math> or <math>ax + b &gt; c</math>.</li> </ul>	<ol style="list-style-type: none"> <li>Solve <math>x^2 &gt; 5x + 6</math>.</li> <li>Graph the solution to <math>y \leq x^2 + 5x + 6</math>.</li> <li>Graph <math>y = 3 x - 2 </math> and identify the domain, range, and intercepts.</li> <li>Solve <math> x - 4  \geq 7</math>.</li> </ol> <p>(see paper attached for answers)</p>

#### Practice workspace and your additional notes/examples:

Use the following graphing utility if needed: [www.desmos.com/calculator](http://www.desmos.com/calculator)

First you rewrite the inequality in standard form, with zero on one side. Graph the quadratic function and determine where it is above or below the x-axis. If the inequality involves "less than," then determine the x-values where the function is below the x-axis.

They create V-Shaped graphs. The minus in front of your absolute value tells you that the V-Shape will open downward. So, the line to the left of -3 will slope upward toward x=-3. And it will slope down as it moves to the right of -3.

To solve, inequalities with absolute values, use a number line to see how far the absolute value is from zero. Split into two cases: when it is positive or negative. Solve each case with algebra. The answer is both cases together, in intervals or words.

### Lesson 7.82 Systems of Inequalities

- ✓ How are solutions found to a system of inequalities?
- ✓ How are solutions to systems of inequalities interpreted in a real-world context?

Key Concepts	Practice
<ul style="list-style-type: none"> <li>Graph each function.</li> <li>A solid line or curve is used for <math>\leq</math> or <math>\geq</math>, while a dashed line or curve is used for <math>&lt;</math> or <math>&gt;</math>.</li> <li>Substitute an ordered pair into the inequalities to determine the overlapping shaded region.</li> <li>Determine if a solution is viable or non-viable.</li> </ul>	<p>Solve the system by graphing:</p> $y < -x^2 + 4x \text{ and } y \geq x^2$ <p>(see attached paper for answers)</p>

#### Practice workspace and your additional notes/examples:

Use the following graphing utility if needed: [www.desmos.com/calculator](http://www.desmos.com/calculator)

The solution to a system of two linear inequalities is a region that contains the solutions to both inequalities. To find this region, you will graph each inequality separately and then locate the region where they are both true.

A system of linear inequalities is often used to determine the best solution to a problem. This solution could be as simple as determining how many of a product should be produced to maximize a profit or as complicated as determining the correct combination of drugs to give a patient.
