GENERAL MAINTENANCE

COOLING SYSTEM

Checking Coolant Level: To obtain maximum efficiency and service life from the engine, it must operate at the correct temperature. This is dependent on the cooling system. The system should be kept filled with clear water with a rust inhibitor or anti-freeze solution.

If the anti-freeze does not contain a rust inhibitor, then

one should be added. Check the coolant level daily or every 10 hours.

1. Remove the radiator cap and check the level of the coolant.

CAUTION: The cooling system operates under pressure which is controlled by the radiator cap. It is dangerous to remove the cap while the system is hot. Always turn the cap slowly to the first stop and allow pressure to escape before removing the cap completely.
