

Oil Level Most faults in an automatic gearbox are caused by the oil level being too low.

Torque Converter If the torque converter is damaged the car may not accelerate properly.

Dipstick

Downshift cable

Controls the gearbox kick-down facility. If the cable is damaged or badly adjusted, the gearbox will not change down when you need it.

Selector linkage

If the linkage is badly adjusted gear selection may suffer.

Inhibitor switch

Prevents the engine from being started in any gear other than 'neutral' or 'park'. If it is broken the engine may not start or there is a danger of the car being accidentally started in drive.

Ventilation grille

Helps to keep the torque converter cool. Make sure it is not blocked by dirt or debris, otherwise the gearbox may overheat.
