Design of Electromechanical Products Ali Jamnia, 2016-12-08

Design development and life cycle management of any electromechanical product is a complex task that requires a cross functional team spanning multiple organizations, including design, manufacturing, and service. Ineffective design techniques combined with poor communication between various teams often leads to delays in product launches, with last minute design compromises and changes. The purpose of *Design of Electromechanical Products: A Systems Approach* is to provide a practical set of guidelines and best practices for driving world class design development and sustainability of electromechanical products. The information provided within this text is applicable across the entire span of product life cycle management, from initial concept work to the detailed design analysis and development stages and through to product support and end of life. It is intended for professional engineers, designers, and technical managers and provides a gateway to developing a product's design history file (DHF) and device master record (DMR). These tools enable design engineers to communicate a product's design
