This book provides sound conceptual understanding of the current approach to management and decision making regarding geo based challenges in developing countries that tend to suffer from information poverty and subjectivity and are reactive. The book also provides the necessary technical tools to energize research thinking and develop locally driven practical and sustainable solutions ultimately moving management and decision making from being reactive to being proactive. This book fills a void as there are no published books to show the way forward or to present real case studies for this purpose. Case studies that utilize new technologies and scientific thinking are presented for developing sustainable management options based either on producing local applied research or on utilising relevant international research. These case studies are based on the author's first hand experiences in arid semi arid Iraq, Tunisia, Morocco and Jordan, temperate UK and tropical environments Malaysia, the Caribbean region, Indonesia and Australia.

This book provides multidisciplinary approaches to smart and sustainable urban ecosystems. Urbanization is a global tendency and up to 70% of the world population is projected to live in cities by 2050. How will this rapid urbanization alter the face of the world? What are the environmental consequences of megacities expansion? What are smart solutions to make life in cities safe, comfortable and environmentally friendly? These and other important questions are addressed by the conference Smart and Sustainable Cities SSC. This year's theme for the conference will be Sustainable urban ecosystems challenges and solutions. Megapolises are complex ecosystems. Air and water quality, vegetation and soils in megapolises are exposed to anthropogenic influence. Studying negative environmental consequences of the anthropogenic and technogenic pressures is among the key tasks of urban ecology and environmental impact assessment. Advanced approaches and smart technologies to monitor, model and assess environmental consequences and risks in megapolises will be widely discussed at the conference. Searching for solutions of the environmental problems of modern megapolises will be the key point of the conference. Successful experiences of sustainable urban development and nature based solutions to support climate adaptation, carbon neutrality and human health will be presented in the conference proceedings.
