INSTALLATION:

1. **Disc Assembly Installation:** Install disc assembly on shaft with TAPER-LOCK® bushing. Disc assembly can be installed with bushing screws toward either side. Tighten the TAPER-LOCK® bushing in accordance with the instructions packed with the bushings. Note balancing match marks on disc and bolt ring O.D.

NOTE: Disregard Step 1 when installing PARA-FLEX Flywheel Couplings.

2. **Flange Installation:** Press or shrink straight bored flange assemblies on the shafts. Install TAPER-LOCK® flanges per instructions packed with the bushings. TAPER-LOCK® flanges on coupling sizes 80 thru 131 are reversible to permit locating bushing screws on the inside or outside of the coupling as desired or convenient. Note: The PK140 flange assembly used on the 172 coupling requires a flange spacer ring which must be installed before mounting flange assembly on the shaft. On models with iron flanges the spacer ring is installed between the flange assembly and external clamp ring, and on models with steel flanges it is installed between the flange assembly and internal clamp ring. See Fig. 1.

Fig. 1 Flange Spacer Ring Location

3. **Align Shafts:** Position shafts for angular and parallel alignment within a 1/64" for normal industrial applications. Position flange assembly so that dimension "C" will be maintained. If shaft end float is to occur, locate shaft at the mid-position of end float. Measure dimension "C", in Table 1, at four places around the diameter. These measurements should not vary more than dimension "C". Where limited end float is required or sleeve bearings are used, consult DODGE.
4. **Flexible Element Installation:** Slip bolt ring over flange and rest it on shaft. Remove clamp ring screws and internal clamp ring. Place internal clamp ring inside the element and reassemble to flange seating the head of the element on the flange. Tighten clamp ring screws alternately and evenly to the torque values shown in column "A" of Table 1.
