Schleiss, Giovanni de Cesare, Mario J. Franca, Michael Pfister, 2014-08-12 The behaviour of river systems is a result of the complex interaction between flow sediments morphology and habitats Furthermore rivers are often used as a source of water supply and energy production as well as a waterway for transportation The main challenge faced by river engineers today in collaboration with environmental and ecological scientists is to restore the channelized rivers under the constraints of high urbanization and limited space as well as sustainable water use During the seventh International Conference on Fluvial Hydraulics River Flow 2014 at cole Polytechnique F d rale de Lausanne EPFL Switzerland scientists and professionals from all over the world addressed this challenge and exchanged their knowledge regarding fluvial hydraulics and river morphology This book comprises the proceedings of the high quality contributions of the participants which reflect the state of the art in the fields of river hydrodynamics morphodynamics sediment transport river engineering and restoration The conference was organized under the auspices of the Committee on Fluvial Hydraulics of the International Association for Hydro Environment Engineering and Research IAHR Past River Flow conferences have witnessed a significant increase in participation of our community of river engineers and researchers confirming the need for such a forum Handbook of Water Resources Management: Discourses, Concepts and Examples Janos J. Instruments and Measurements S.C. Bhargava, 2012-12-27 This book written for the benefit of engineering students and practicing engineers alike is the culmination of the author's four decades of experience related to the subject of electrical measurements comprising nearly 30 years of experimental research and more than 15 years of teaching at several engineering institutions. The unique feature of this book apart from covering the syllabi of various universities is the style of presentation of all important aspects and features of electrical measurements with neatly and clearly drawn figures, diagrams and colour and b/w photos that illustrate details of instruments among other things making the text easy to follow and comprehend. Enhancing the chapters are interspersed explanatory comments and where necessary footnotes to help better understanding of the chapter contents. Also each chapter begins with a recall to link the subject matter with the related science or phenomenon and fundamental background. The first few chapters of the book comprise Units, Dimensions and Standards, Electricity, Magnetism and Electromagnetism and Network Analysis. These topics form the basics of electrical measurements and provide a better understanding of the main topics discussed in later chapters. The last two chapters represent valuable assets of the book and relate to a Magnetic Measurements describing many unique features not easily available elsewhere, a good study of which is essential for the design and development of most electric equipment from motors to transformers and alternators and b Measurement of Non electrical Quantities dealing extensively with the measuring techniques of a number of variables that constitute an important requirement of engineering measurement practices. The book is supplemented by ten appendices covering various aspects dealing with the art and science of electrical measurement and of relevance to some of the topics in main chapters. Other useful features of the book include an elaborate chapter by chapter list of symbols, worked examples, exercises and quiz questions at the end of each chapter and extensive authors and subject index. This book will be of interest to all students taking courses in electrical measurements as a part of a B Tech in electrical engineering. Professionals in the field of electrical engineering will also find the book of use. *Urban Water Systems & Floods* D. Proverbs, S. Mambretti, C.A. Brebbia, N. Ursino, 2016-08-31 *Urban Water III* is the proceedings of the 3rd International Conference on the Design, Construction, Maintenance, Monitoring and Control of Urban Water Systems. The conference reconvened following its success in 2012 and in 2014 when it was held in the Algarve, Portugal. These proceedings deal with two main subjects: water supply systems and urban drainage. Water distribution networks often suffer substantial losses which indicate energy and treatment waste. Sewer systems are under relentless pressure due to urbanisation and climate change and the environmental impact caused by urban drainage overflows is related to both water quantity and water quality. Most architects and town planners are aware of the importance of the interaction between urban water cycles and city planning and landscaping. Specialised computer tools are needed to manage all of these aspects and are required to respond to the increased complexity of urban water systems. Topics such as contamination and pollution discharges in urban water bodies as well as the monitoring of water recycling systems are currently receiving a great deal of

attention from researchers and professional engineers working in the water industry Other related topics include Leakage and losses Modelling and experimentation Safety and security of water systems Maintenance and repairs Surface water and groundwater sources Reservoirs Network design Waste water treatment and disposal Combined sewer networks Flood control Storage tanks Environmental impact Domestic and industrial waste water issues In addition to the above the conference discusses legal and regulatory aspects along with more technical problems **APAC 2019** Nguyen Trung Viet,Dou Xiping,Tran Thanh Tung,2019-09-25 This book presents selected articles from the International Conference on Asian and Pacific Coasts APAC 2019 an event intended to promote academic and technical exchange on coastal related studies including coastal engineering and coastal environmental problems among Asian and Pacific countries regions APAC is jointly supported by the Chinese Ocean Engineering Society COES the Coastal Engineering Committee of the Japan Society of Civil Engineers JSCE and the Korean Society of Coastal and Ocean Engineers KSCOE APAC is jointly supported by the Chinese Ocean Engineering Society COES the Coastal Engineering Committee of the Japan Society of Civil Engineers JSCE and the Korean Society of Coastal and Ocean Engineers KSCOE
