Mercury

Mercury is the closest planet to the Sun. Unlike most of the other planets in the solar system, Mercury has no moons. The surface of Mercury is rocky and covered with craters, similar to the Moon. These craters were formed from collisions with comets and meteoroids.

Mercury is so close to the Sun that it has no atmosphere to regulate temperature. During the planet's day, the temperature on the surface can reach 430°C. At night-time, temperatures on the surface can fall to a freezing -170°C.

Mercury is visible from Earth in the late evening and in the early morning. Just before the Sun rises, Mercury can be seen shining brightly which is why it is often called the morning star.

The core of the planet is made up of iron which makes Mercury very heavy. It is the second densest planet after the Earth. One day on Mercury is equal to 58 Earth days. It takes 88 Earth days for Mercury to orbit the sun.

In Greek mythology, Mercury is known as Hermes, the messenger of the Gods. To the Greeks, Mercury was known as 'Apollo' when it appeared in the morning and 'Hermes' when it appeared in the evening.

Questions

- Does Mercury have any moons? _____
- How are the craters formed on Mercury's surface?

- How low can the temperature drop at night-time on Mercury?

- When is Mercury visible from Earth?
