Bio-inspired Audio Processing, Models and Systems Shih-Chii Liu, John G. Harris, Mounya Elhilali, Malcolm Slaney, 2019-12-05 Neurophysiology and biology provide useful starting points to help us understand and build better audio processing systems The papers in this special issue address hardware implementations spiking networks sound identification and attention decoding [UAV-Based Remote Sensing Volume 2](#) Felipe Gonzalez Toro, Antonios Tsourdos, 2018-04-27 This book is a printed edition of the Special Issue UAV Based Remote Sensing that was published in Sensors [Exploring Music Contents](#) Solvi Ystad, Mitsuko Aramaki, Richard Kronland-Martinet, Kristoffer Jensen, 2011-09-15 This book constitutes the thoroughly refereed post proceedings of the 7th International Symposium on Computer Music Modeling and Retrieval CMMR 2010 held in M laga Spain in June 2010 The 22 revised full papers presented were specially reviewed and revised for inclusion in this proceedings volume The book is divided in five main chapters which reflect the present challenges within the field of computer music modeling and retrieval The chapters range from music interaction composition tools and sound source separation to data mining and music libraries One chapter is also dedicated to perceptual and cognitive aspects that are currently subject to increased interest in the MIR community **Mathematical Aspects of Computer and Information Sciences** Daniel Slamanig, Elias Tsigaridas, Zafeirakis Zafeirakopoulos, 2020-03-18 This book constitutes the refereed proceedings of the 8th International Conference on Mathematical Aspects of Computer and Information Sciences MACIS 2019 held in Gebze Turkey in November 2019 The 22 revised papers and 14 short papers presented were carefully reviewed and selected from 66 submissions The papers are organized in the following topical sections algorithms and foundation security and cryptography combinatorics codes designs and graphs data modeling and machine learning tools and software track **Performance Analysis and Modeling of Digital Transmission Systems** William Turin, 2012-12-06 This book is an expanded third edition of the book Performance Analysis of Digital Transmission Systems originally published in 1990 Second edition of the book titled Digital Transmission Systems Performance Analysis and Modeling was published in 1998 The book is intended for those who design communication systems and networks A computer network designer is interested in selecting communication channels error protection schemes and link control protocols To do this efficiently one needs a mathematical model that accurately predicts system behavior Two basic problems arise in mathematical modeling the problem of identifying a system and the problem of applying a model to the system analysis System identification consists of selecting a class of mathematical objects to describe fundamental properties of the system behavior We use a specific class of hidden Markov models HMMs to model communication systems This model was introduced by C E Shannon more than 50

years ago as a Noisy Discrete Channel with a finite number of states The model is described by a finite number of matrices whose elements are estimated on the basis of experimental data We develop several methods of model identification and show their relationship to other methods of data analysis such as spectral methods autoregressive moving average CARMA approximations and rational transfer function approximations **Speech Enhancement** Philipos C. Loizou, 2013-02-25 With the proliferation of mobile devices and hearing devices including hearing aids and cochlear implants there is a growing and pressing need to design algorithms that can improve speech intelligibility without sacrificing quality Responding to this need **Speech Enhancement Theory and Practice Second Edition** introduces readers to the basic pr
