**4e de couverture** *Modern Biophysical Chemistry* Peter Jomo Walla, 2015-09-10. This updated and up to date version of the first edition continues with the really interesting stuff to spice up a standard biophysics and biophysical chemistry course. All relevant methods used in current cutting edge research including such recent developments as super resolution microscopy and next generation DNA sequencing techniques as well as industrial applications are explained. The text has been developed from a graduate course taught by the author for several years and by presenting a mix of basic theory and real life examples he closes the gap between theory and experiment. The first part on basic biophysical chemistry surveys fundamental and spectroscopic techniques as well as biomolecular properties that represent the modern standard and are also the basis for the more sophisticated technologies discussed later in the book. The second part covers the latest bioanalytical techniques such as the mentioned super resolution and next generation sequencing methods, confocal fluorescence microscopy, light sheet microscopy, two photon microscopy and ultrafast spectroscopy, single molecule optical electrical and force measurements, fluorescence correlation spectroscopy, optical tweezers, quantum dots and DNA origami techniques. Both the text and illustrations have been prepared in a clear and accessible style with extended and updated exercises and their solutions accompanying each chapter. Readers with a basic understanding of biochemistry and/or biophysics will quickly gain an overview of cutting edge technology for the biophysical analysis of proteins, nucleic acids and other biomolecules and their interactions. Equally any student contemplating a career in the chemical, pharmaceutical or bio industry will greatly benefit from the technological knowledge presented. Questions of differing complexity testing the reader's understanding can be found at the end of each chapter with clearly described solutions available on the Wiley-VCH textbook homepage under [www.wiley-vch.de/textbooks](http://www.wiley-vch.de/textbooks).

**Poincare's Prize** George G. Szpiro, 2008-07-29. The amazing story of one of the greatest math problems of all time and the reclusive genius who solved it. In the tradition of Fermat's Enigma and Prime Obsession, George Szpiro brings to life the giants of mathematics who struggled to prove a theorem for a century and the mysterious man from St Petersburg, Grigory Perelman, who finally accomplished the impossible. In 1904, Henri Poincaré developed the Poincaré Conjecture, an attempt to understand higher dimensional space and possibly the shape of the universe. The problem was he couldn't prove it. A century later it was named a Millennium Prize problem, one of the seven hardest problems we can imagine. Now this holy grail of mathematics has been found. Accessibly interweaving history and math, Szpiro captures the passion, frustration and excitement of the hunt and provides a fascinating portrait of a contemporary noble genius.

**General Chemistry** Ralph H. Petrucci, 1989. *Maths for Chemistry* Paul Monk, Lindsey J. Munro, 2010-04-29. Maths for Chemistry recognizes the challenges faced by many students in

equipping themselves with the maths skills needed to gain a full understanding of chemistry offering a carefully structured and steadily paced introduction to the essential mathematical concepts all chemistry students should master **Physics of the Life Sciences** Jay Newman, 2010-03-23 Each chapter has three types of learning aides for students open ended questions multiple choice questions and quantitative problems There is an average of about 50 per chapter There are also a number of worked examples in the chapters averaging over 5 per chapter and almost 600 photos and line drawings
