R-5.1) Hint When the algorithm finds a match, does it know where?

R-5.1) Solution

```
public static int binarySearch(int[ ] data, int target, int low, int high) {
  if (low > high)
    return −1;                              // failed search
  else {
    int mid = (low + high) / 2;
    if (target == data[mid])
      return mid;                           // index of found match
    else if (target < data[mid])
      return binarySearch(data, target, low, mid − 1);
    else
      return binarySearch(data, target, mid + 1, high);
  }
}
```

R-5.2) Hint This is probably the first power algorithm you were taught.

Dale,Chip Weems,Mark R. Headington,2001 This book breaks the current paradigms for teaching Java object oriented programming This book has been developed from the ground up to be a Java text rather than a Java translation of prior works The text uses real Java I O classes treats event handling as a fundamental control structure that is introduced right from the beginning The authors carefully guide the student through the process of declaring a reference variable instantiating an object assigning it to the variable Students will gradually develop a complete comprehensive understanding of what an object is how it works what constitutes a well designed class interface A challenge to teaching programming using a language as complex as Java is selecting which portions of the language to teach The authors have taken great care to select a subset of the language library to illustrate all of the fundamental concepts The result is that when students are finished with the course they can write real Java programs without being dependent on a text supplied library have the ability to extend their knowledge of I O classes to include the many optional features that are available **Innovative Security Solutions for Information Technology and Communications** Mark Manulis,Diana Maimuţ,George Teşeleanu,2024-01-20 This book constitutes revised selected papers from the thoroughly refereed conference proceedings of the 16th International Conference on Innovative Security Solutions for Information Technology and Communications SecITC 2023 held in Bucharest Romania in November 2023 The 14 full papers included in the book were carefully reviewed and selected from 57 submissions They focus on all theoretical and practical aspects related to information technology and communications security **Automatic Algorithm Selection for Complex Simulation Problems** Roland Ewald,2011-11-20 To select the most suitable simulation algorithm for a given task is often difficult This is due to intricate interactions between model features implementation details and runtime environment which may strongly affect the overall performance An automated selection of simulation algorithms supports users in setting up simulation experiments without demanding expert knowledge on simulation Roland Ewald analyzes and discusses existing approaches to solve the algorithm selection problem in the context of simulation He introduces a framework for automatic simulation algorithm selection and describes its integration into the open source modelling and simulation framework James II Its selection mechanisms are able to cope with three situations no prior knowledge is available the impact of problem features on simulator performance is unknown and a relationship between problem features and algorithm performance can be established empirically The author concludes with an experimental evaluation of the developed methods A Layered Declarative Approach to Ontology Translation with Knowledge Preservation Oscar Corcho,2005 The ontology translation problem aka ontology interoperability problem appears when we decide to reuse an ontology or part of an ontology with a tool or language that is different from those ones in which the ontology is available If we force each ontology based system developer individually to commit to the task of translating and incorporating to their systems the ontologies that they need they will require a lot of effort and time to achieve their objective This book presents two contributions to the current state of the art on ontology translation among languages and or
