Heartsaver CPR Adult and Pediatric Pretest

1. You respond to someone who has just collapsed (you witnessed the collapse). After you make sure that the scene is safe, what is the next thing you should do?
- a. Check for unresponsiveness; if the victim is unresponsive, phone 911
 - b. Phone 911; wait outside to direct the emergency responders
 - c. Do 2 finger sweeps; check if food is blocking the airway
 - d. Perform CPR for 1 minute; then phone 911

The correct answer is a.

Your first action after determining that the scene is safe is to check if the victim is unresponsive. If the victim is unresponsive, you should phone (or send someone to phone) the emergency medical services (EMS) system.

Answer b is incorrect because you should not phone 911 until you have checked responsiveness. When you have determined that the victim is unresponsive and you phone 911, you should return to the victim and begin CPR.

Answer c is incorrect because you should not perform finger sweeps or check the victim's mouth unless you strongly suspect that an obstruction is blocking the airway or there is evidence of something in the victim's mouth.

Answer d is incorrect because for adult victims of sudden cardiac arrest you should phone 911 as soon as you determine that the victim is unresponsive. You do not begin CPR before phoning 911 because you must be sure emergency help (including a defibrillator) is on the way.

- a. Give her 1 aspirin, then have her rest for an hour
 - b. Have her lie down, then call her private physician
 - c. Let her walk outside to breathe fresh air
 - d. Have her lie down or recline, then phone 911 immediately

The correct answer is d.

These signs and symptoms are consistent with signs of a heart attack (myocardial infarction). The most common sign of heart attack is chest pain or pressure that may radiate to the neck or jaw or down the left arm and may even be felt in the back, between the shoulder blades.
