

## REMOVAL

## NOTES

The removal and installation steps listed apply when replacing the entire switch assembly, switch housing or handlebars.

On FXDWG and FXDB models, the turn signal wiring is routed through the lower switch housings. On FXDWG models, the turn signal wires are then routed through the handlebars. See 2.27 HANDLEBARS FXDWG for more information.

## CAUTION

Do not remove the switch housing assembly without first placing a 5/32 in. (4 mm) thick cardboard insert between the brake lever and lever bracket. Removing the assembly without the insert in place may result in damage to the rubber boot and plunger of the front spotlight switch.

1. See Figure 8-87. Place the cardboard insert between the brake lever and lever bracket.
2. Using a T27 TORX drive head, remove the two screws with flat washers securing the handlebar clamp to the master cylinder housing. Remove the brake lever/master cylinder assembly and clamp from the handlebar.
3. Using a T25 TORX drive head, remove the upper and lower switch housing screws.
4. Remove the friction shoe from the end of the tension adjuster screw.

## NOTE

The friction screw is a loose fit and may fall out or become dislodged if the lower switch housing is turned upside down or shaken.

5. Remove the brass ferrules from the notches on the inboard side of the throttle control grip. Remove the ferrules from the cable end fittings.
6. Remove the throttle control grip from the end of the handlebar.
7. Pull the crimped inserts at the end of the throttle and idle control cable housings from the lower switch housing. For best results, use a rocking motion while pulling. Place a drop of light oil on the retaining rings, if necessary. Remove the cables from the switch housing.

## INSTALLATION

1. With the concave side facing upward, install the friction shoe so that the pin hole is over the point of the adjuster screw.

## NOTE

The friction shoe is a loose fit and may fall out or become dislodged if the lower switch housing is turned upside down or shaken.
